

Date-partitioned server archive

Actual C:/data/SOURCES1 JSON, loaded through the legacy YAML and namespace model. The main timeline and broader overview share one pinned query; row pages do not change its time map.

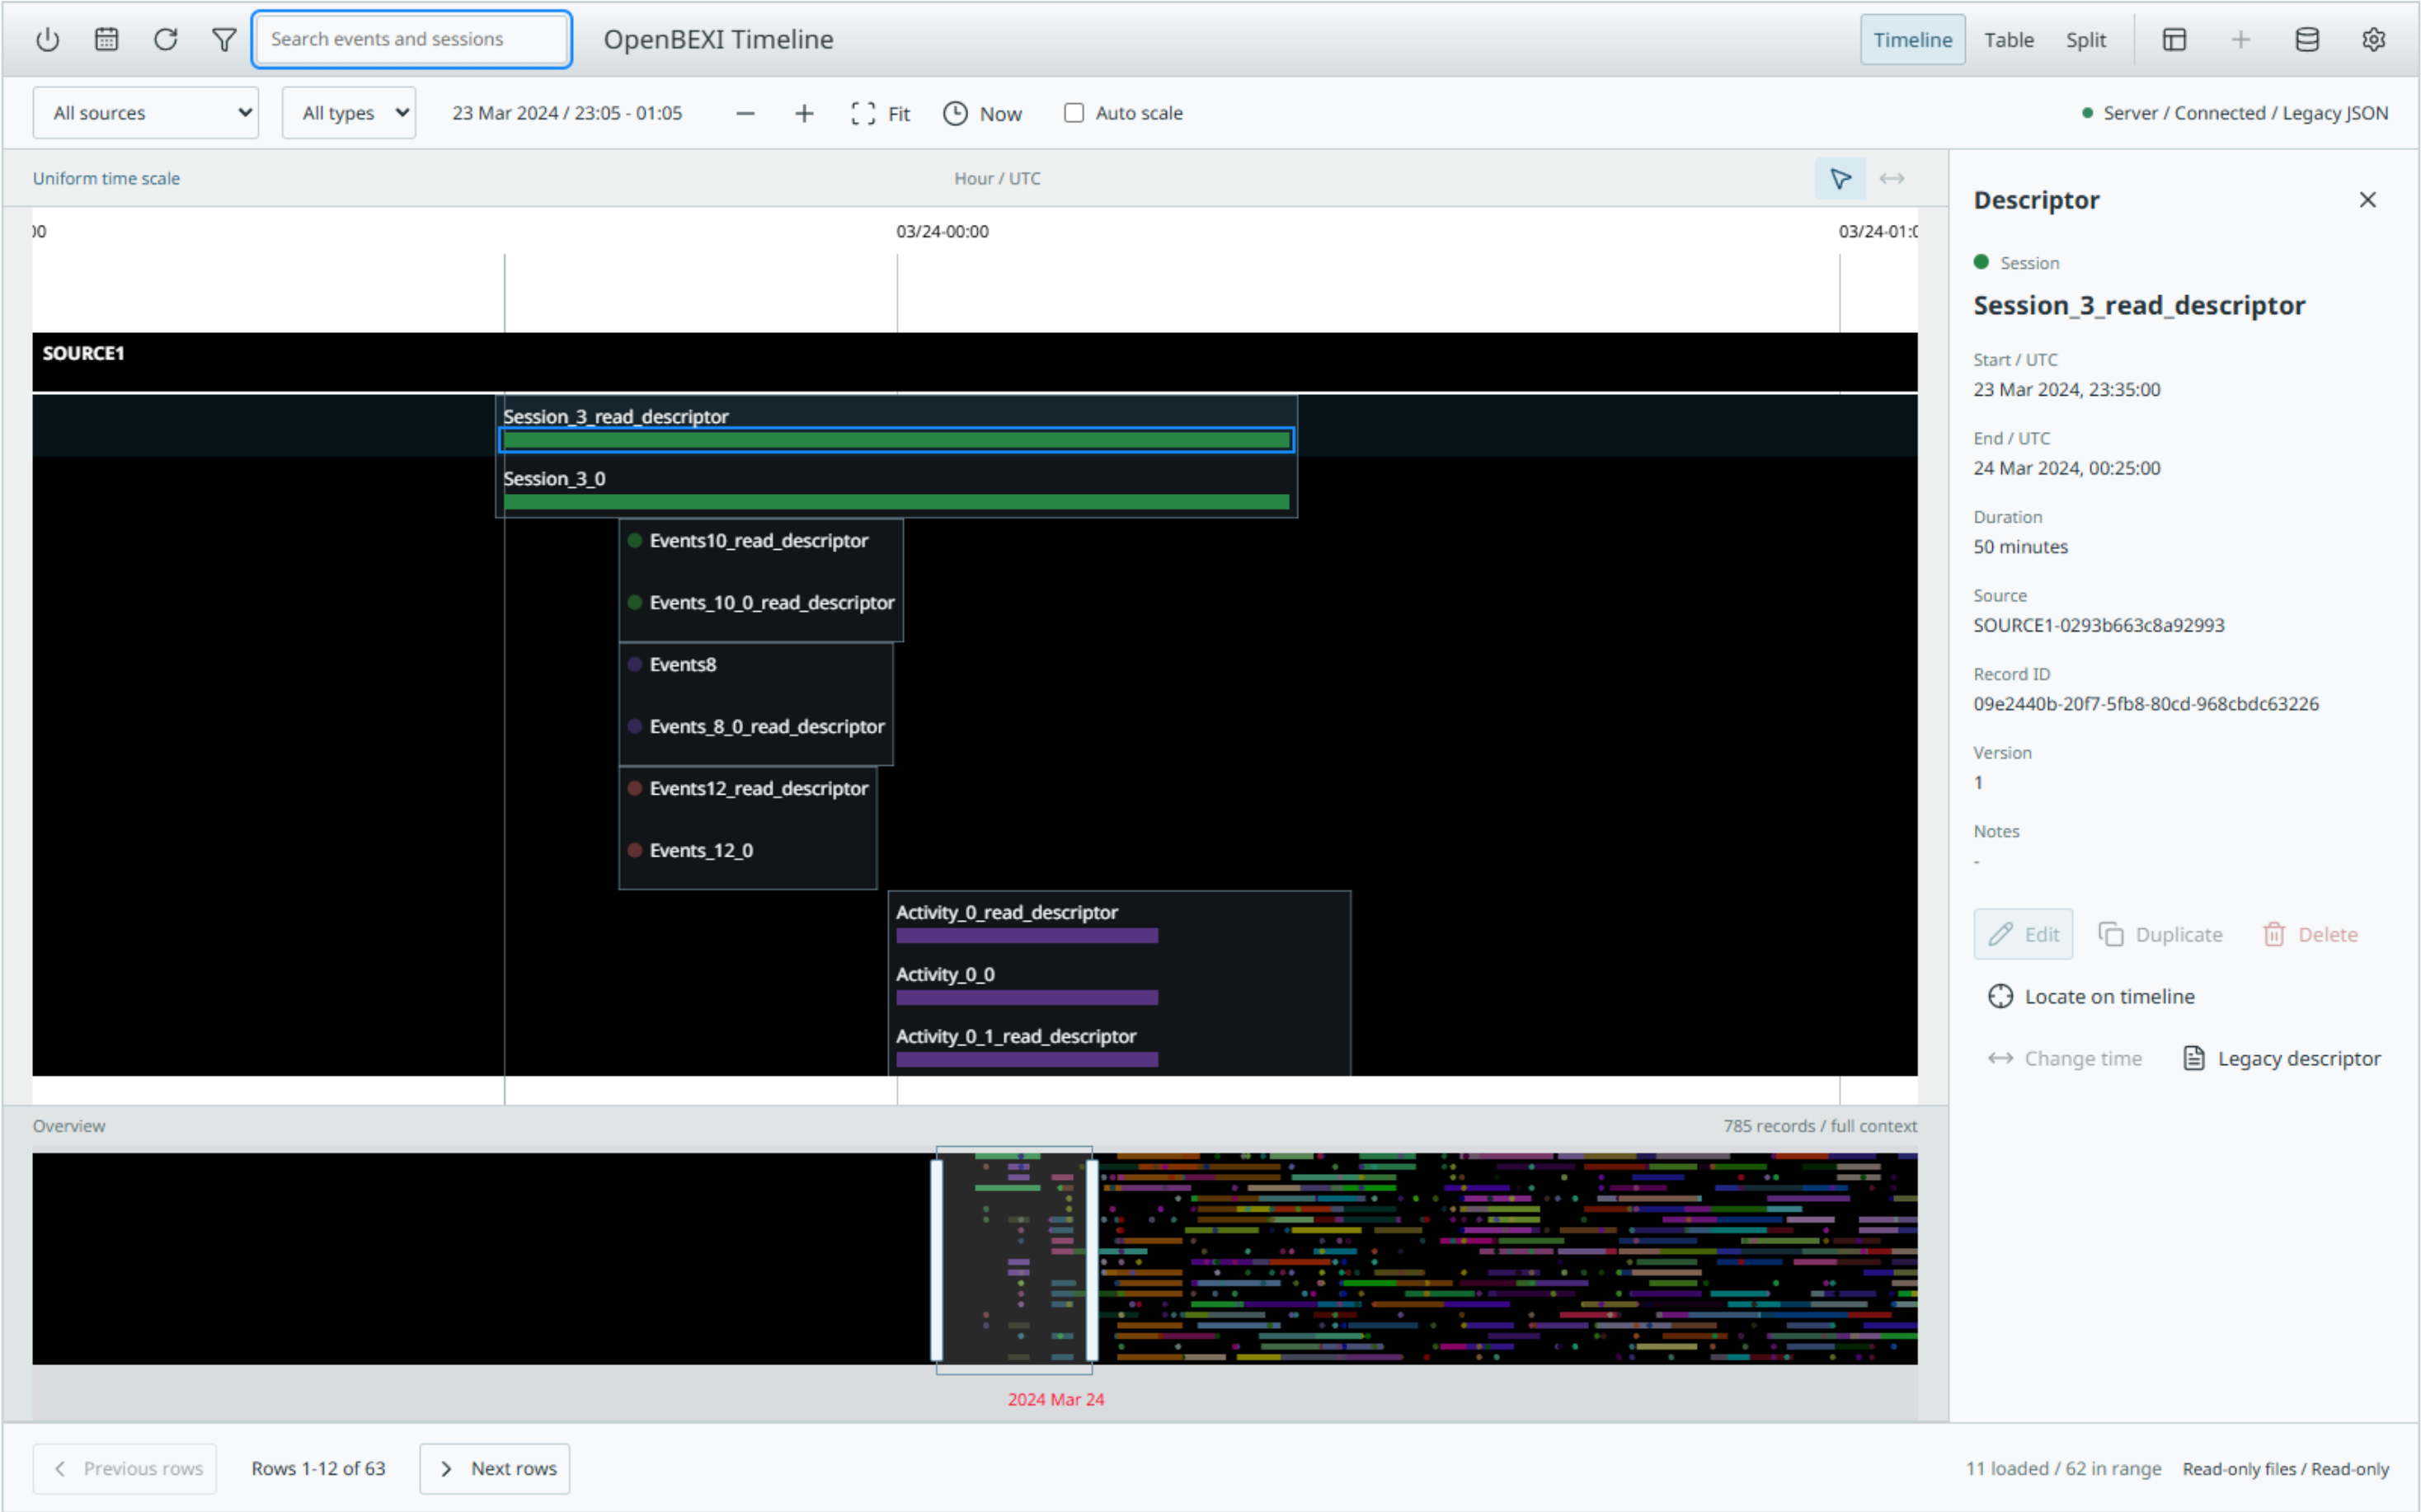

Search and matching overview

Actual legacy test SOURCE1 data, exported for 18 March 2024, 19:00-21:00 UTC. The selected row page contains the yellow 5_1 and 0_3 findings; the overview contains only search matches.

Selection and descriptor

The selected session retains its start, end and namespace. The descriptor stays beside the timeline; record edits are disabled for the linked read-only authority.

Mobile timeline

The same JavaScript/Three.js application at a mobile viewport. The overview and vertical-page controls remain available; the page does not expand to fit the archive.
