

OpenBEXI Timeline 2.0 / Standalone timeline

The complete embedded sample, two synchronized bands, measured rows and aligned zones.

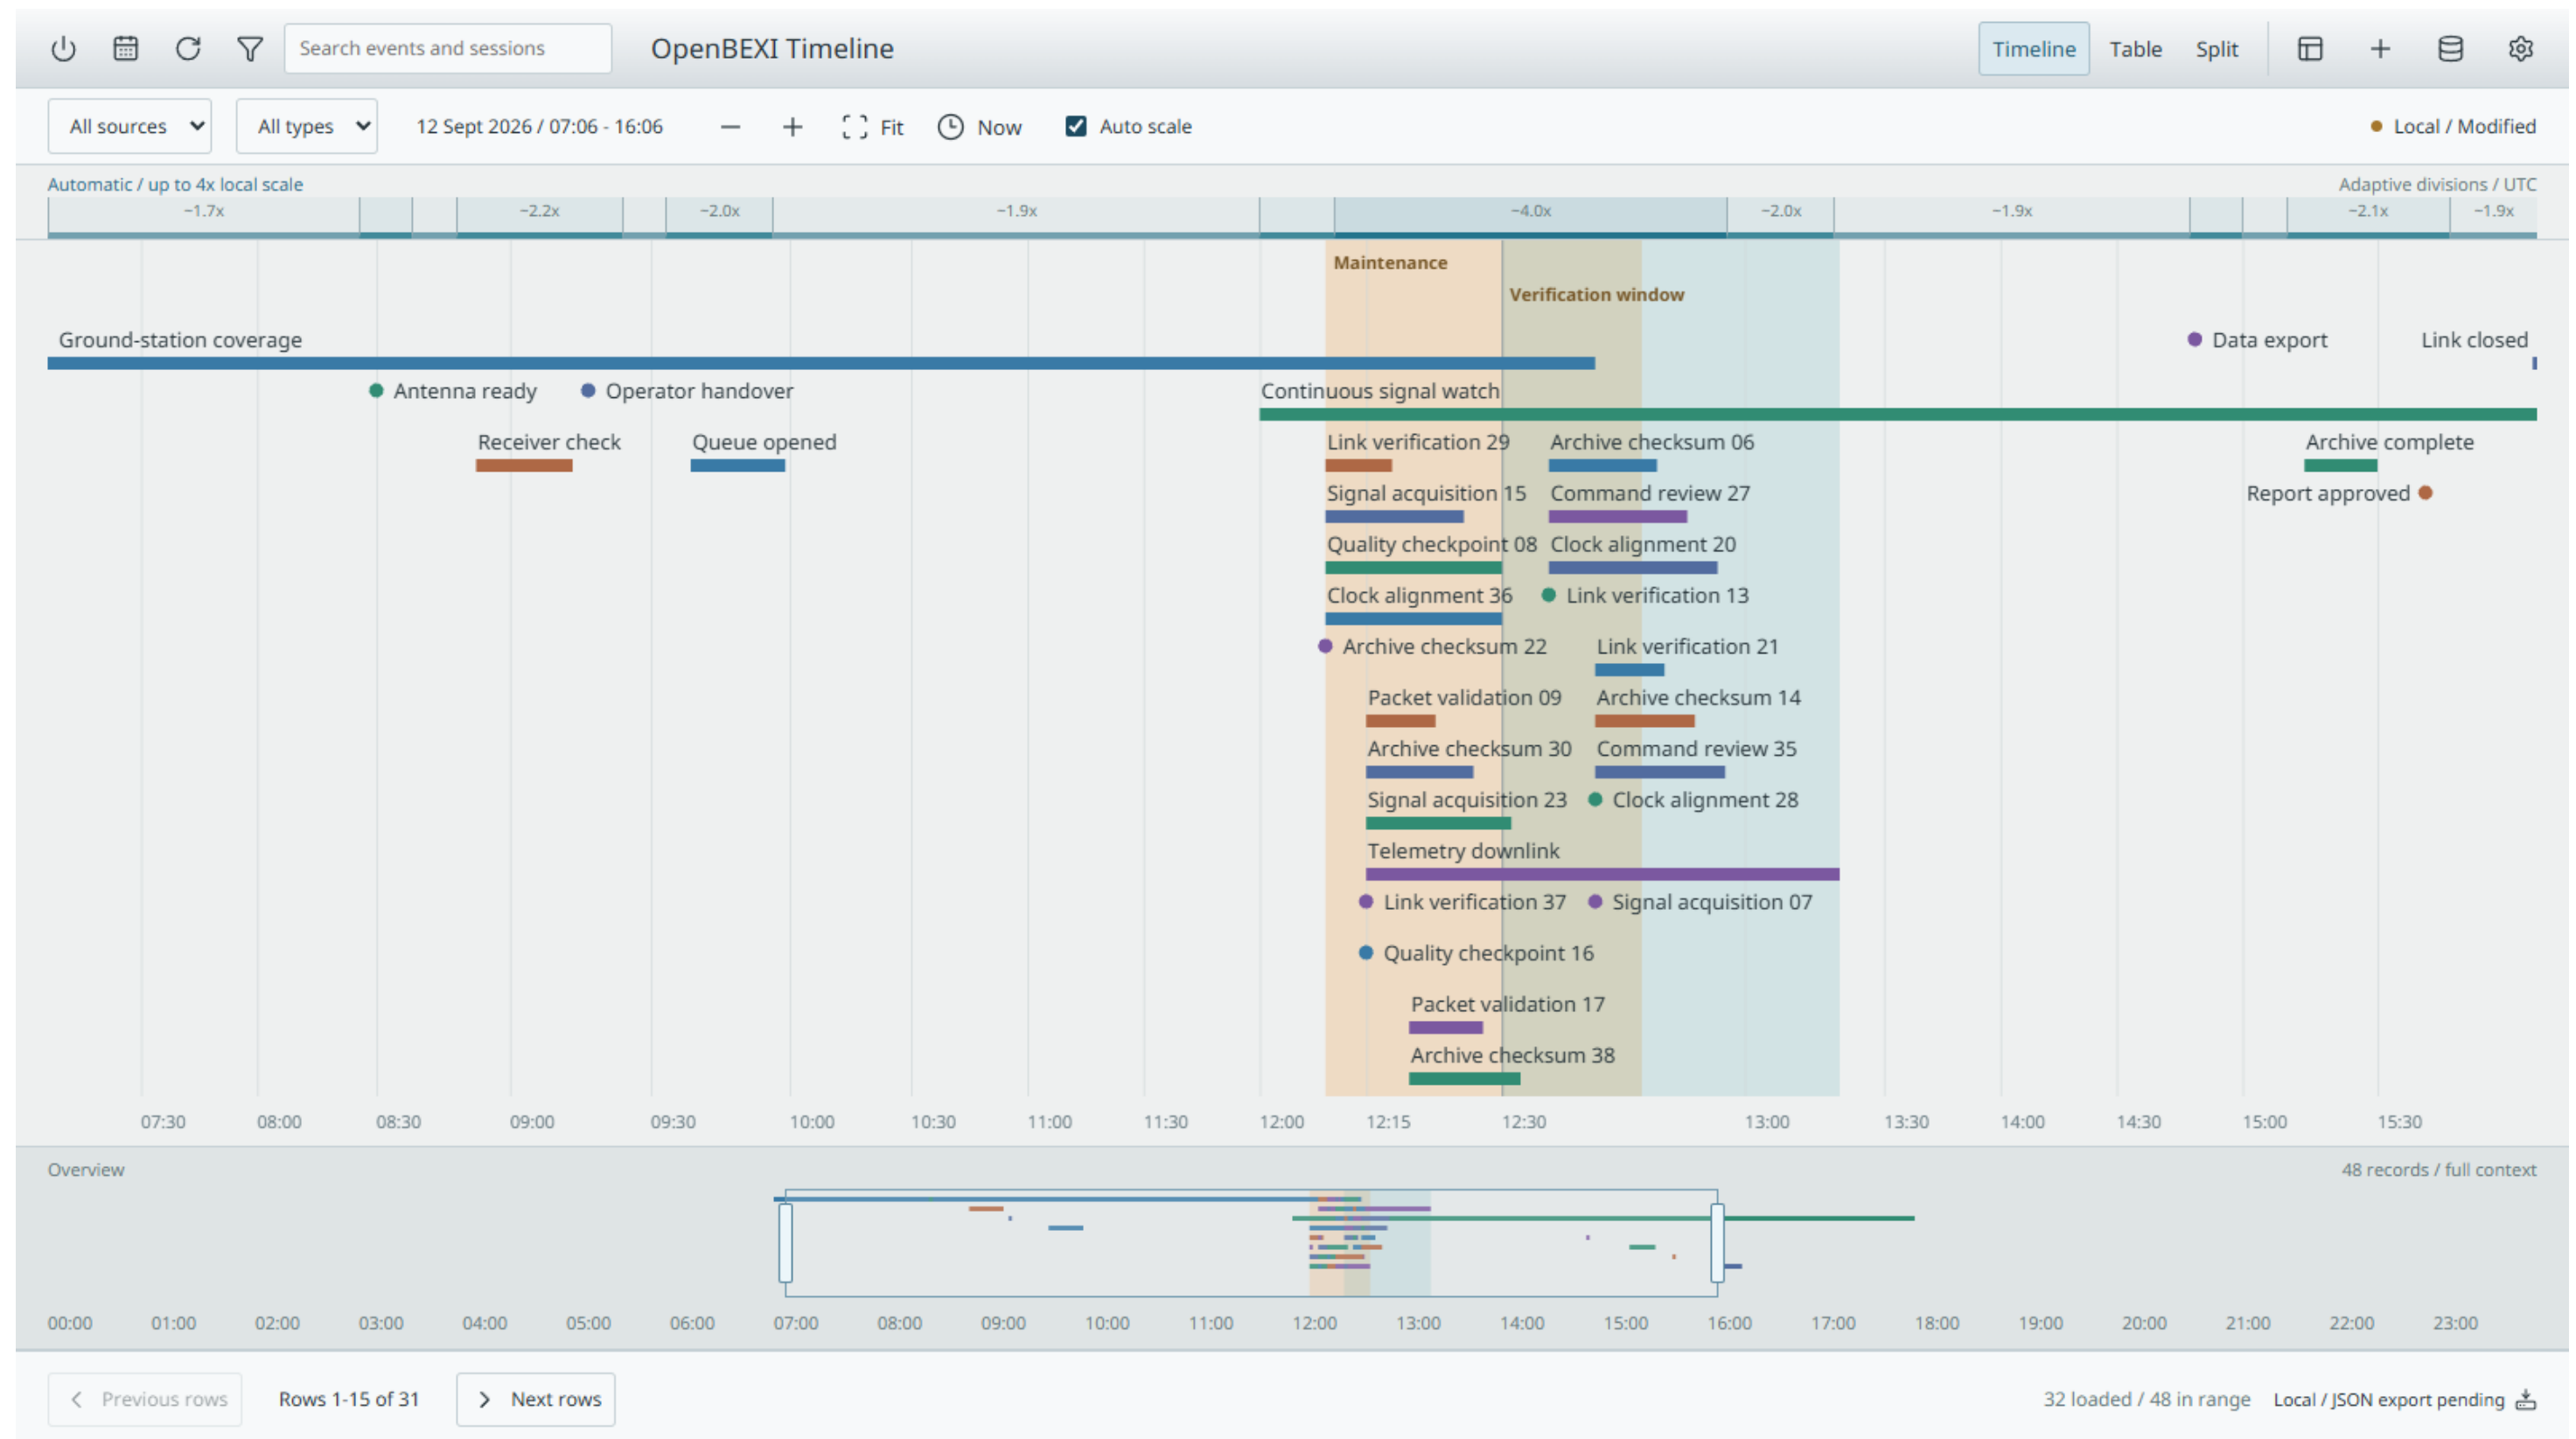

OpenBEXI Timeline 2.0 / Contextual search

Matching labels are highlighted; the overview shows all findings, not just the current row page.

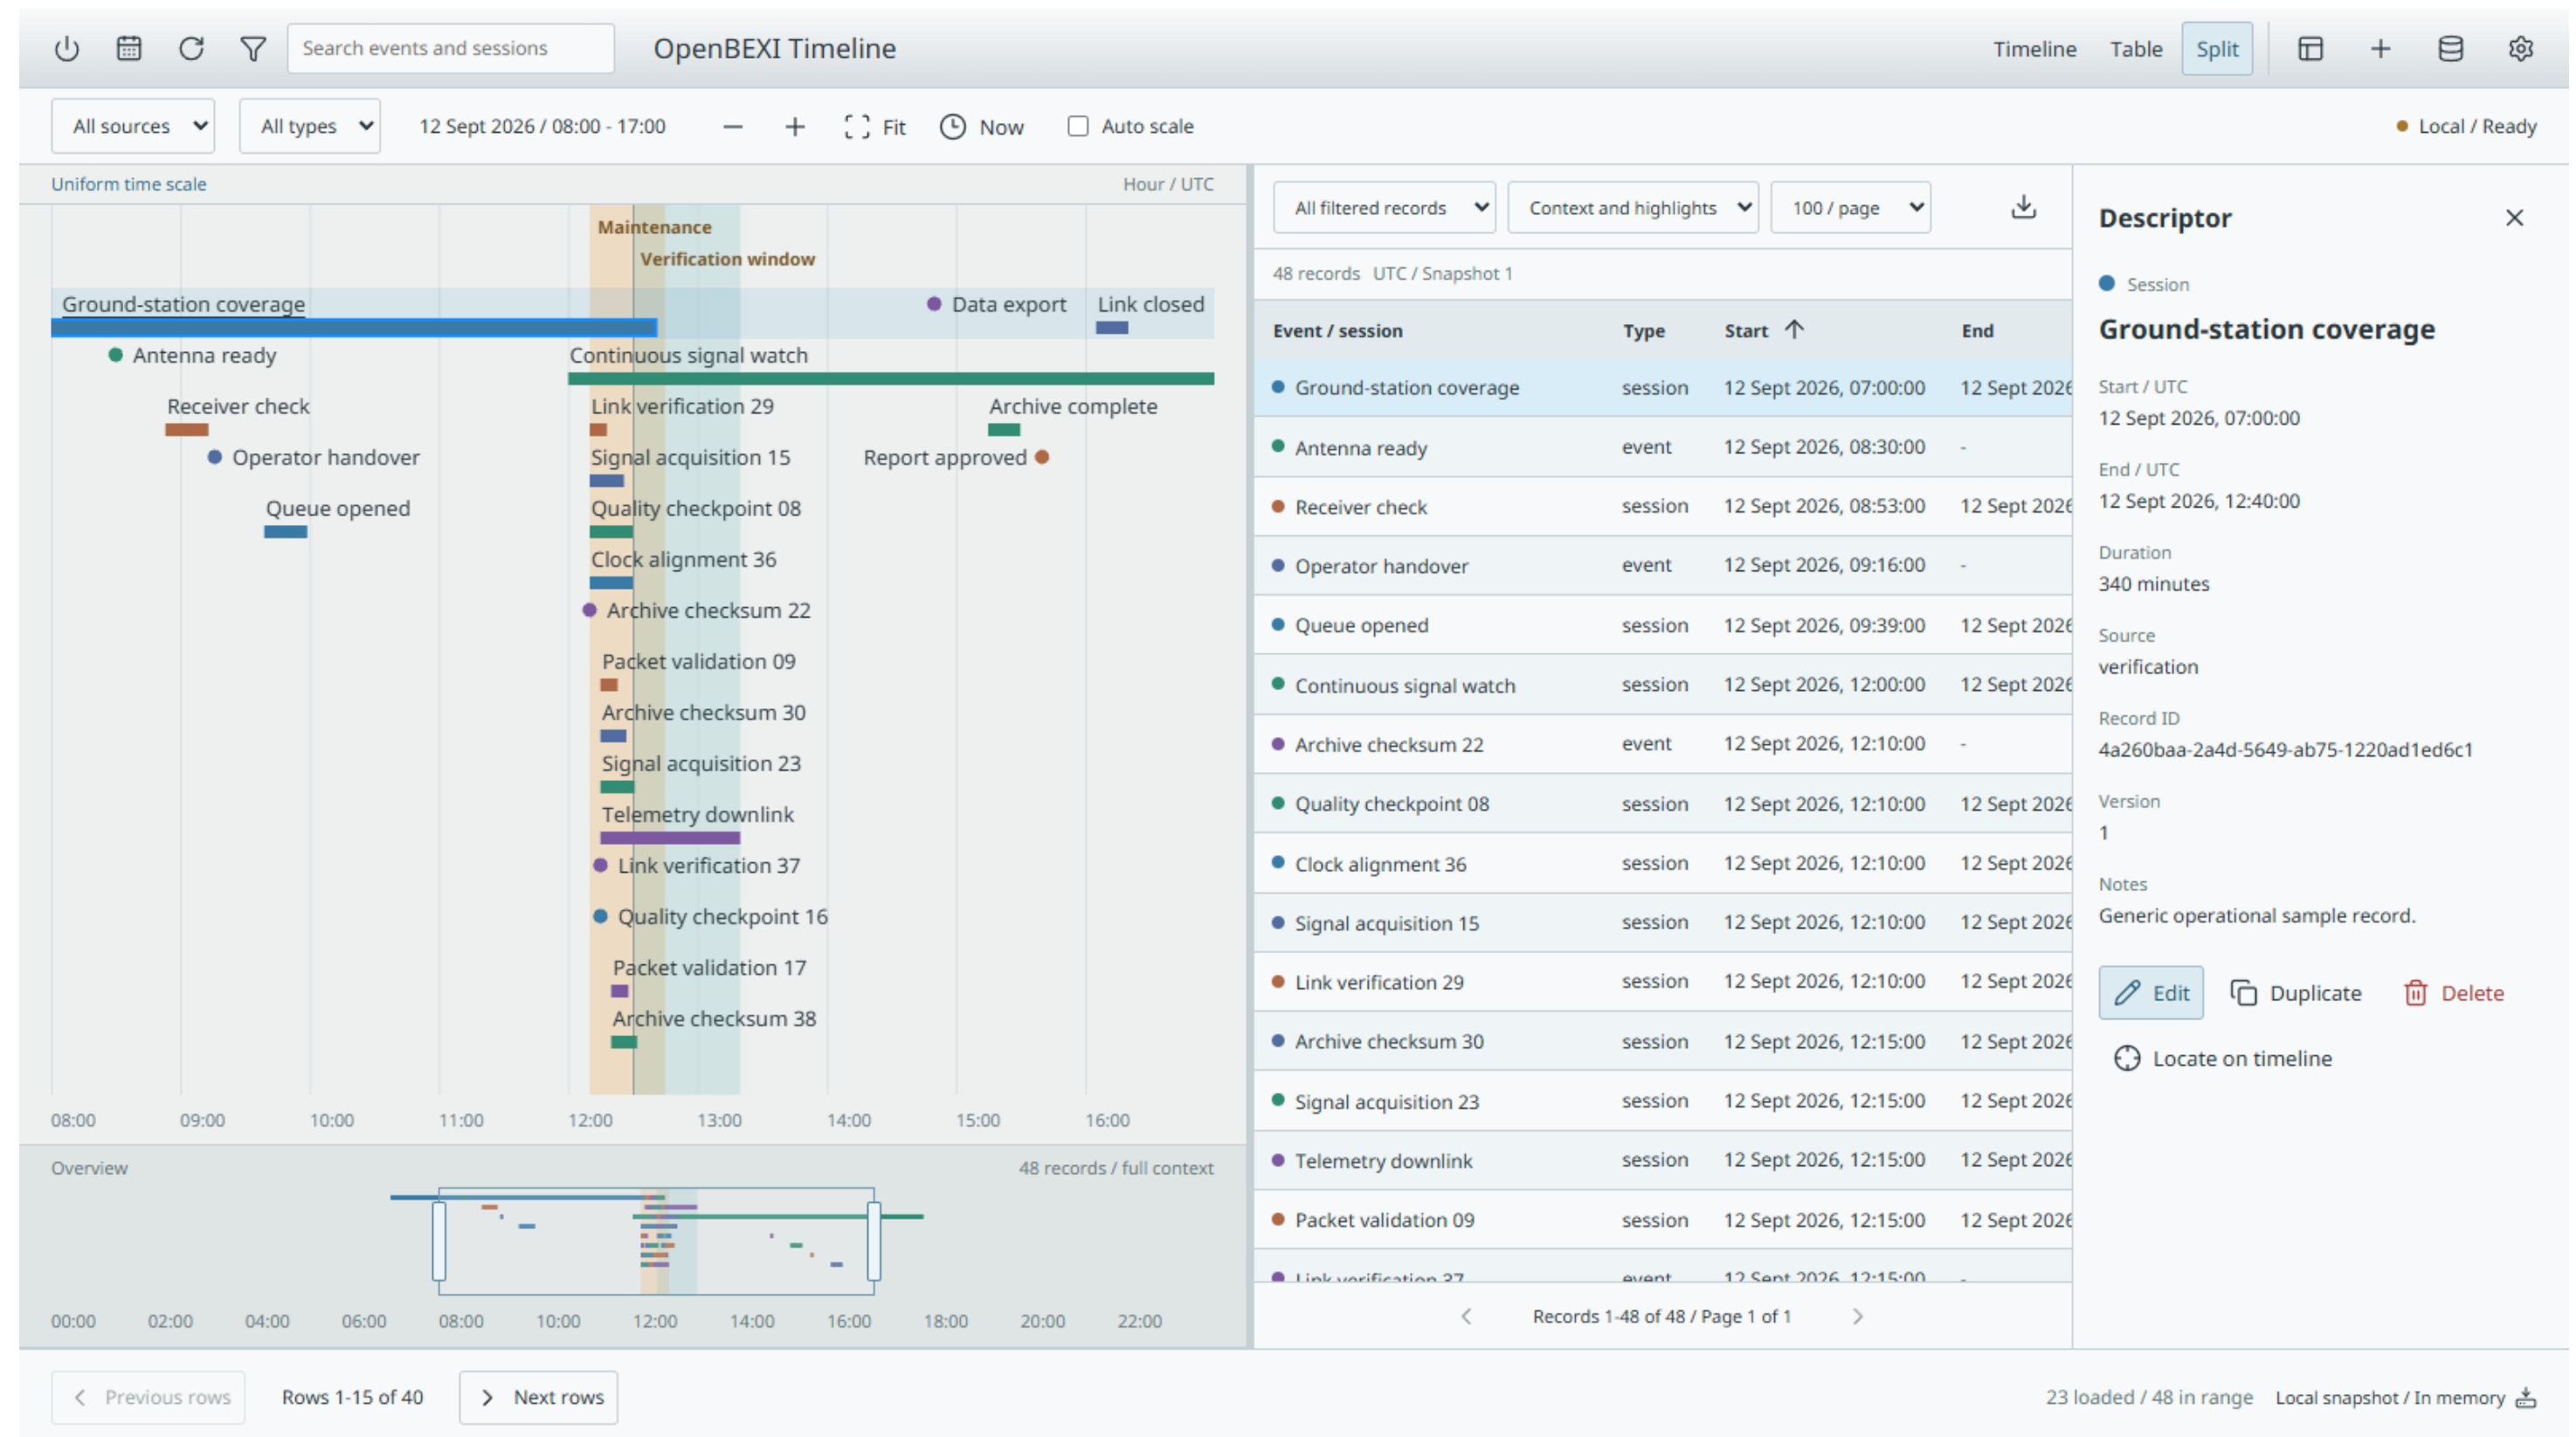

OpenBEXI Timeline 2.0 / Adaptive time scale

Local magnification expands dense intervals while pagination handles excess simultaneous rows.

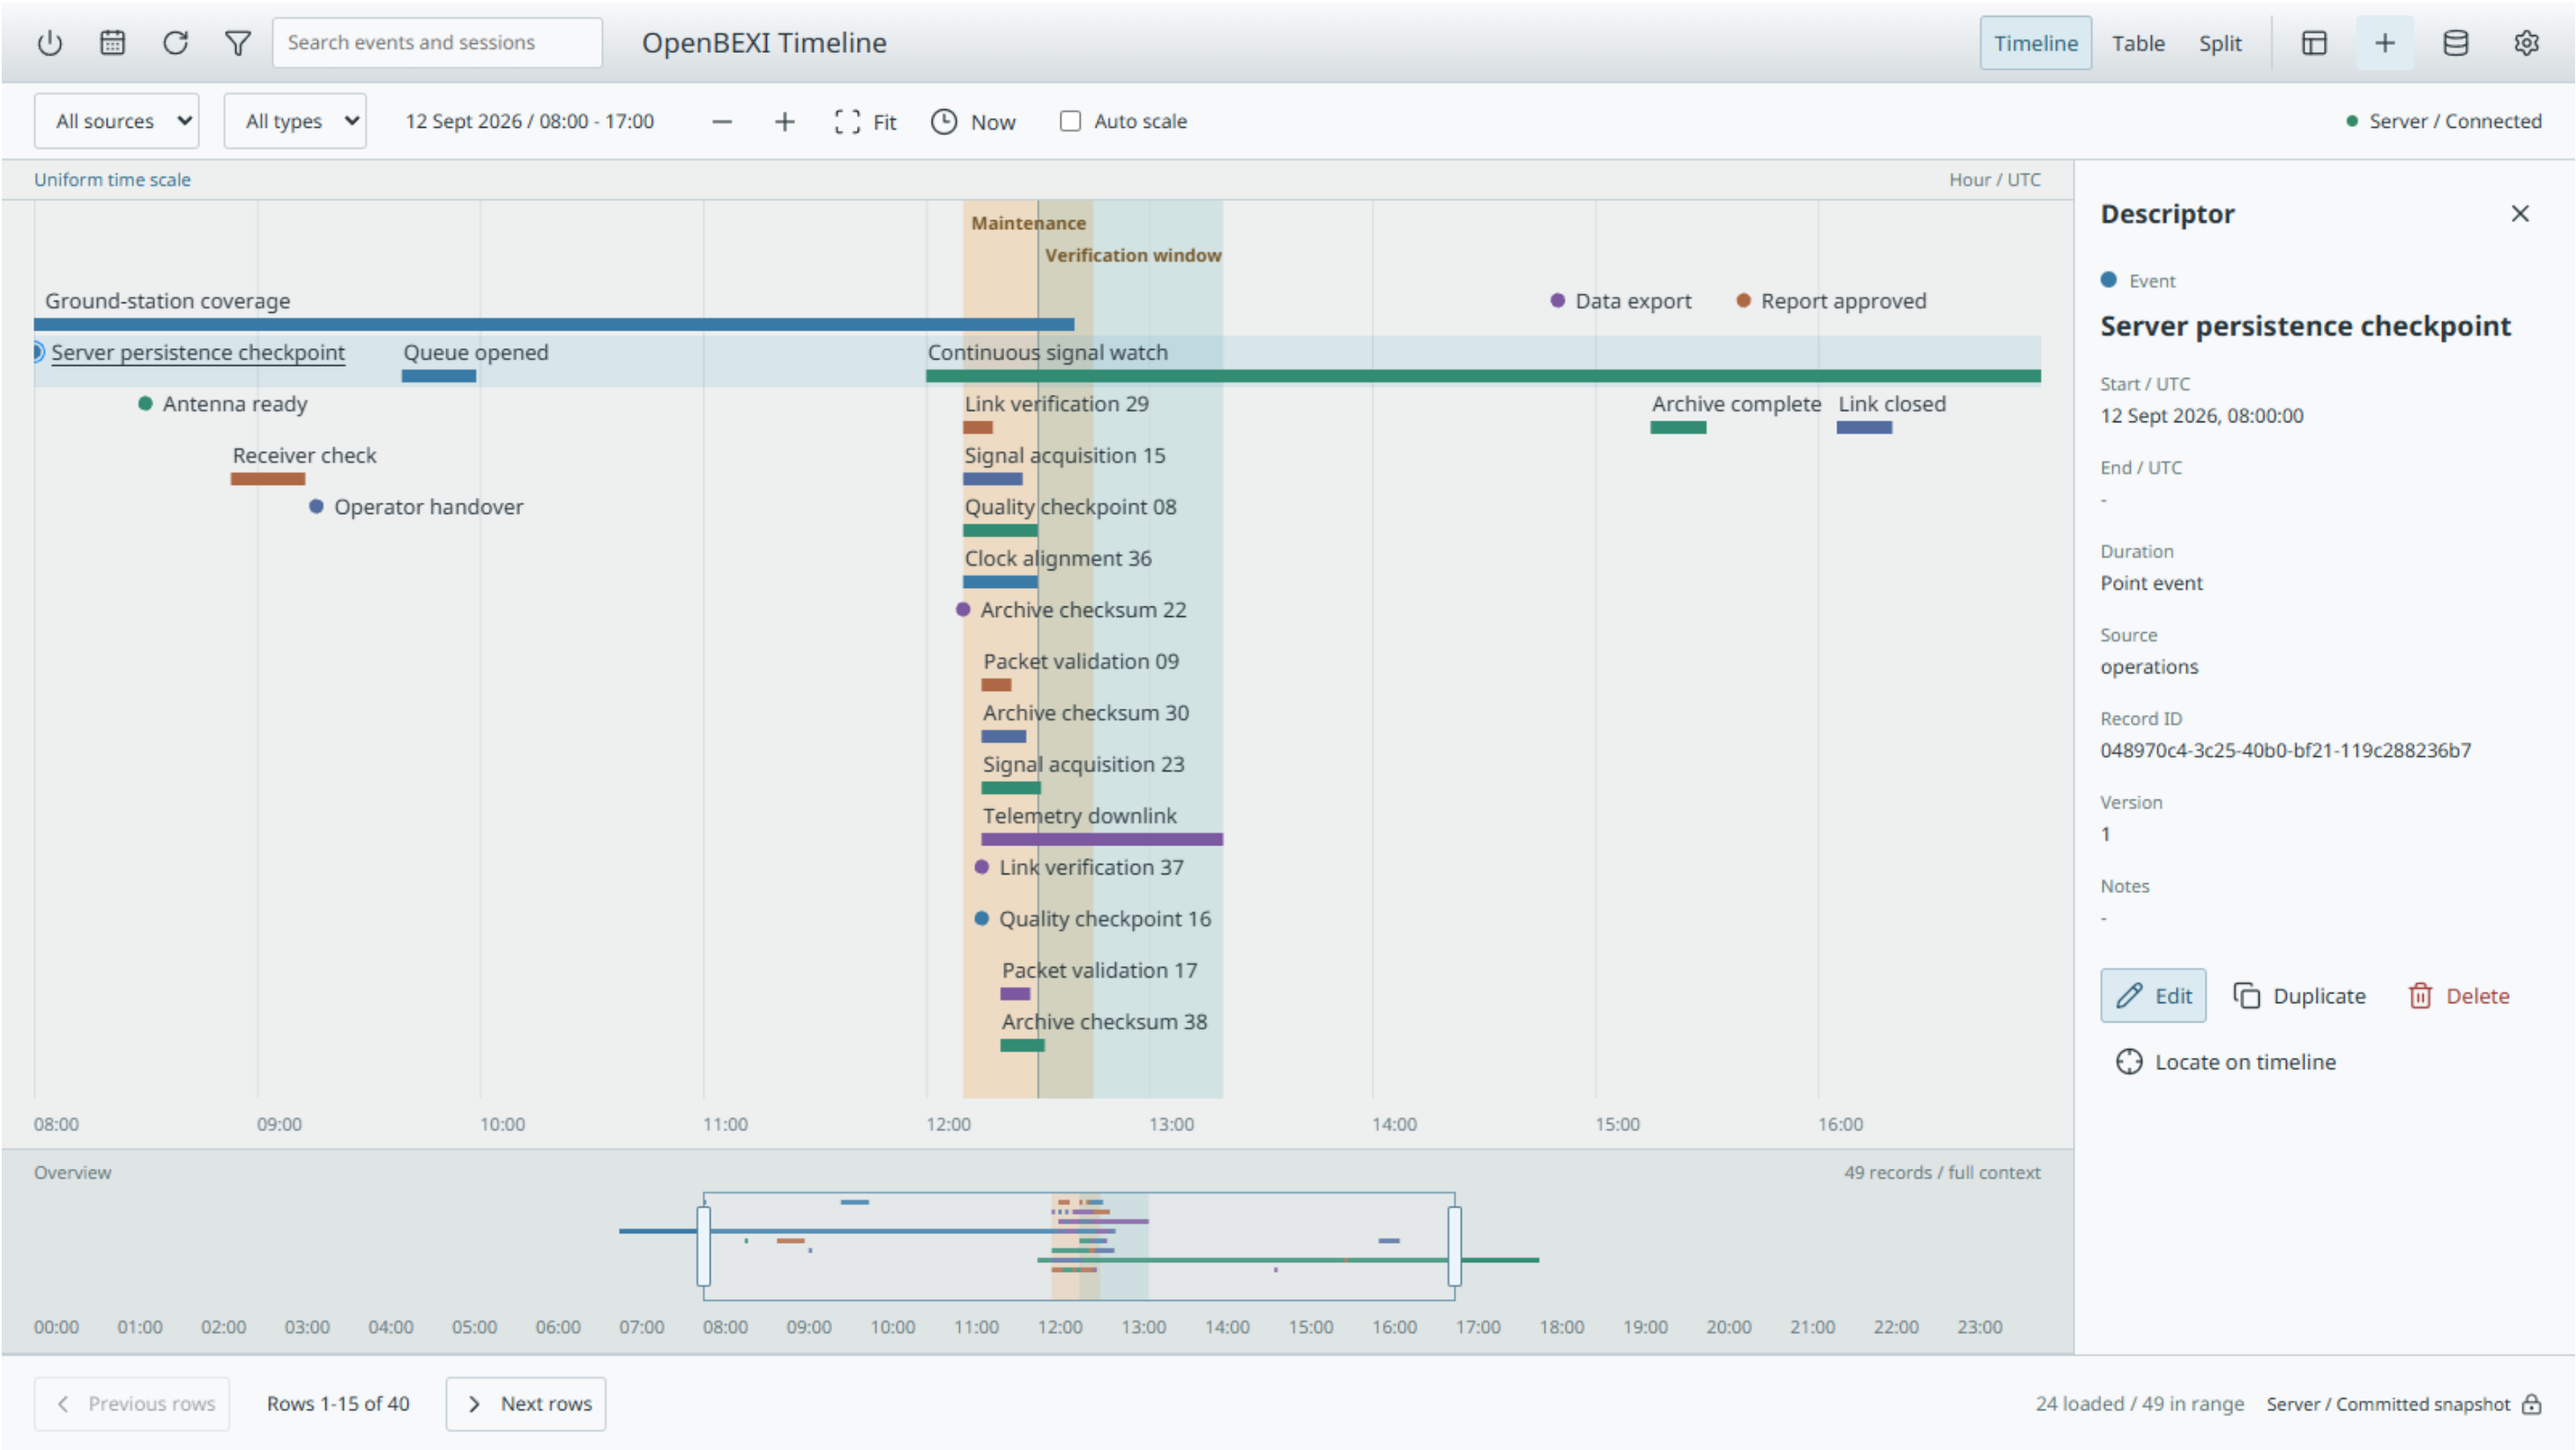

OpenBEXI Timeline 2.0 / Selection and Split view

The selected record has a right-side descriptor; timeline rows and table records have independent pagination.

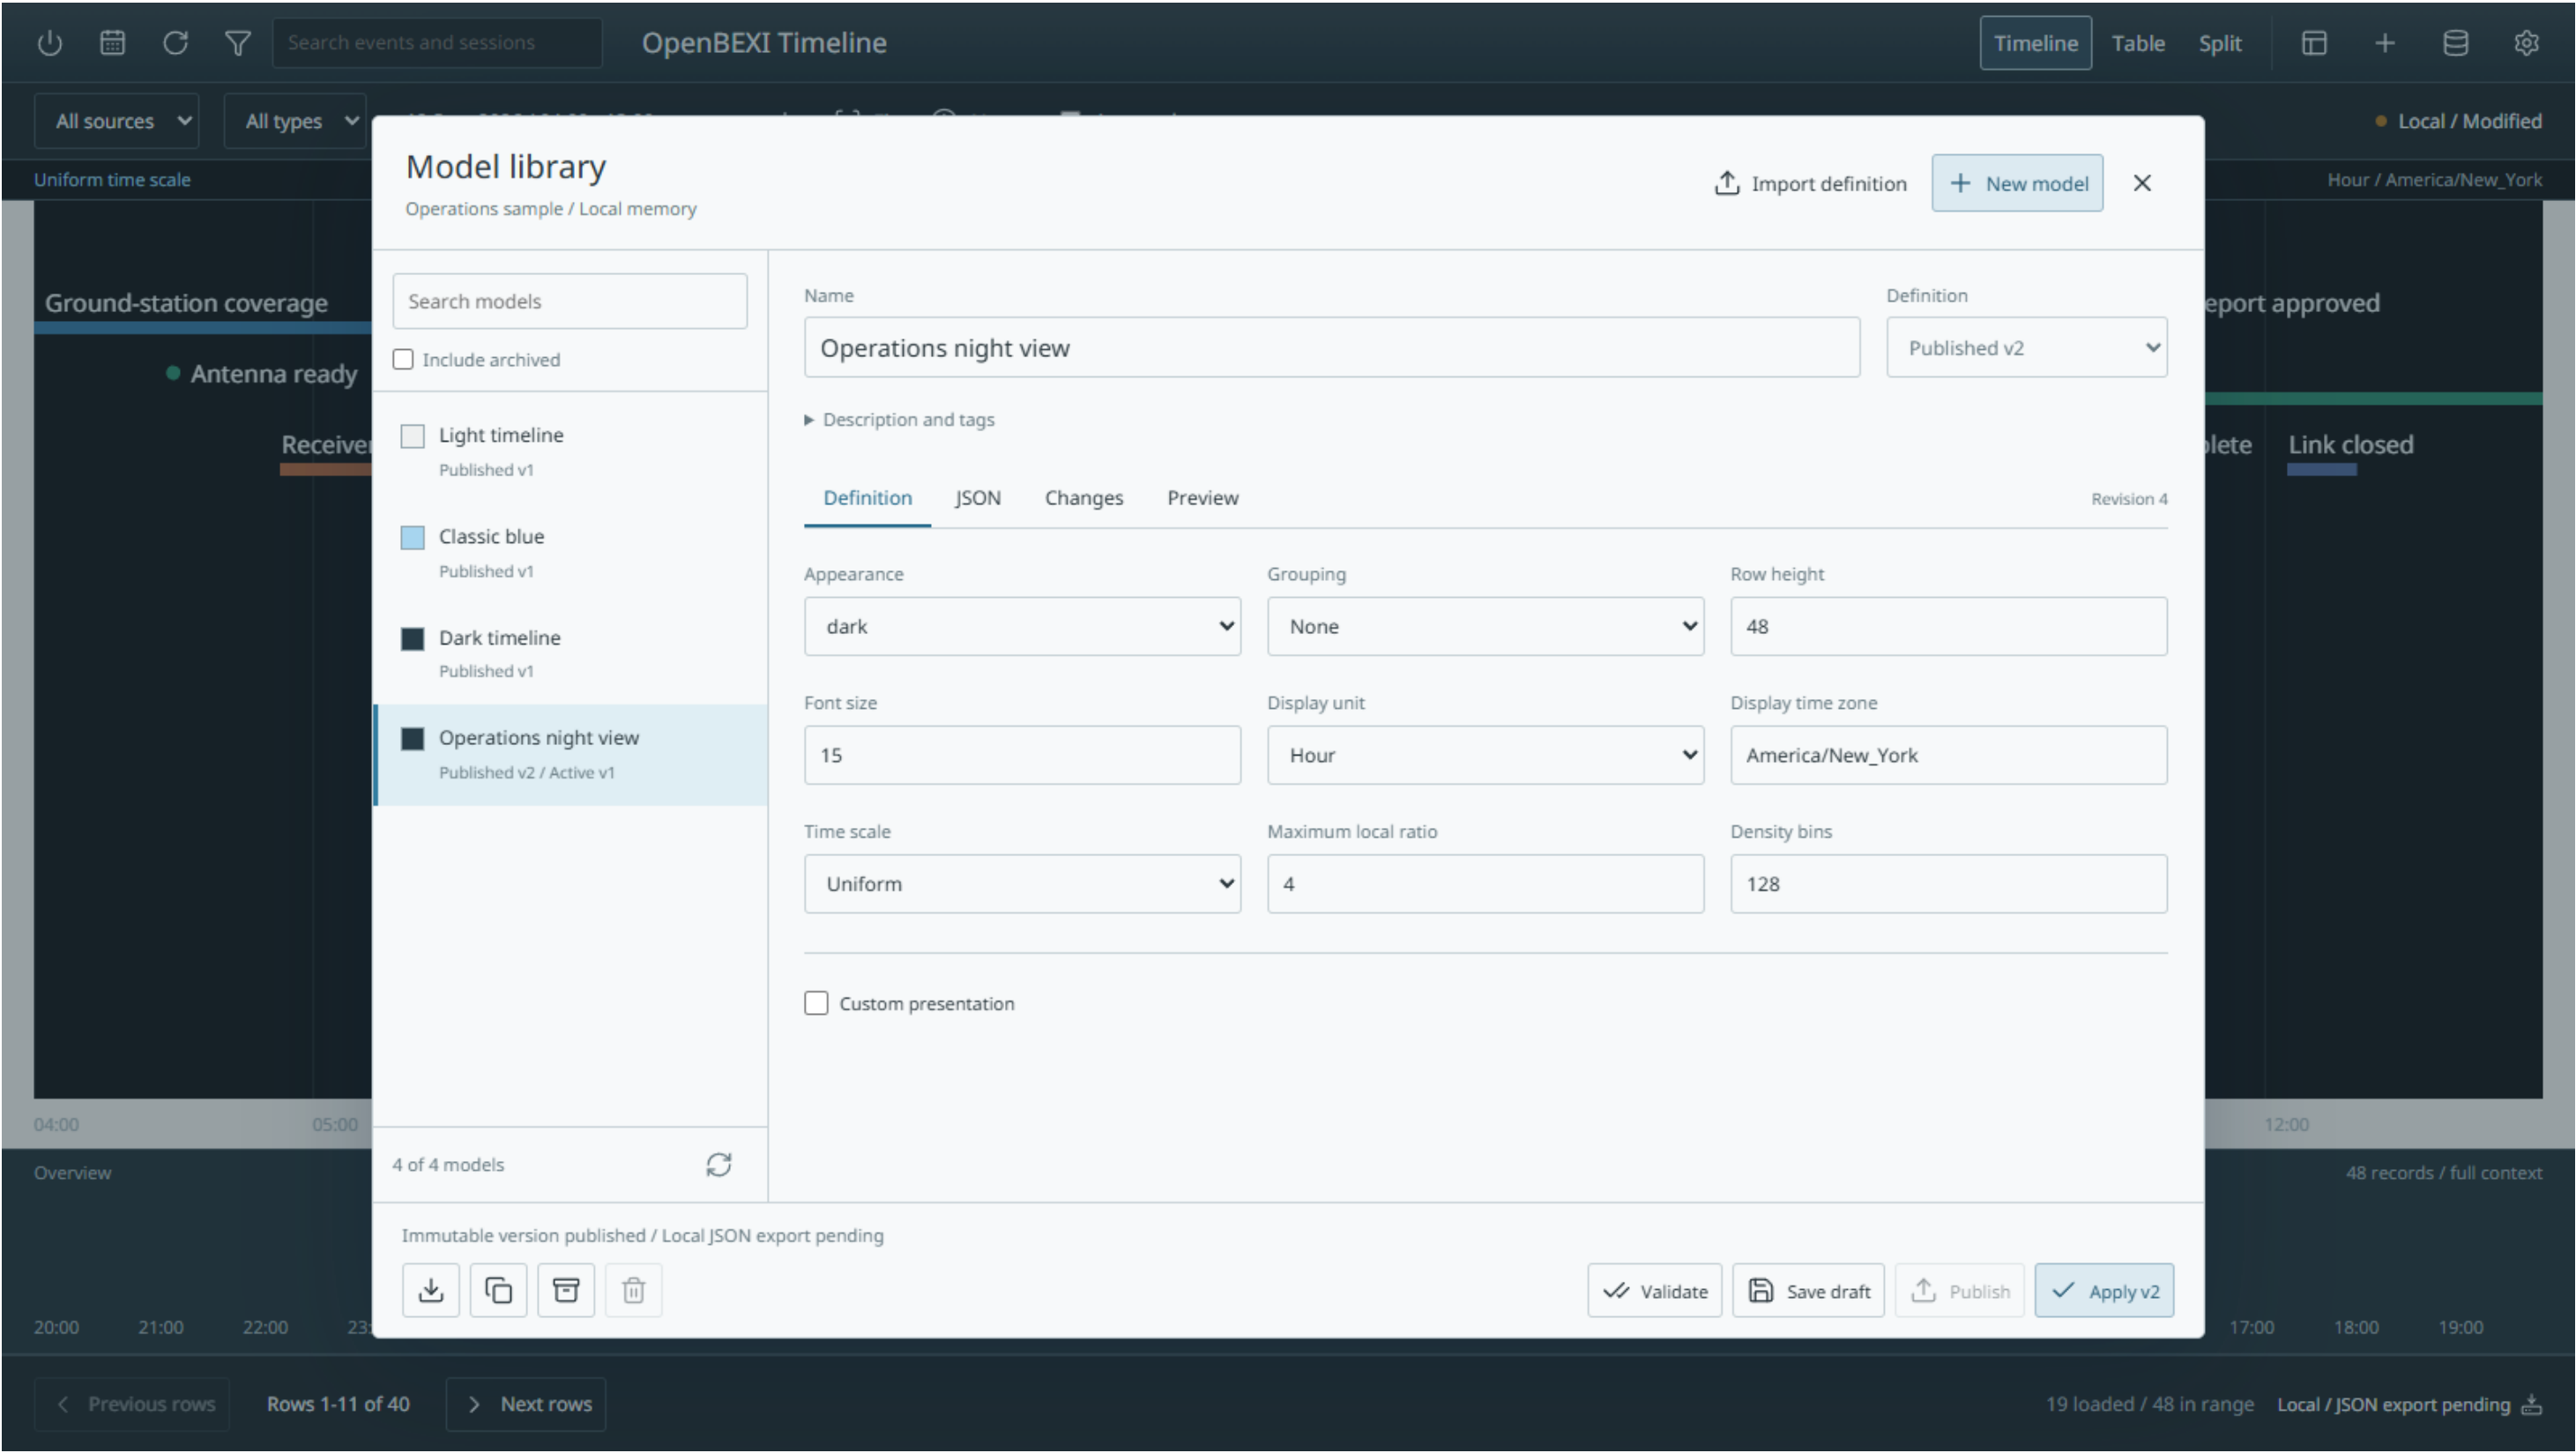

OpenBEXI Timeline 2.0 / Python-connected mode

The same application reads and writes a JSON-only Python service through the common provider interface.

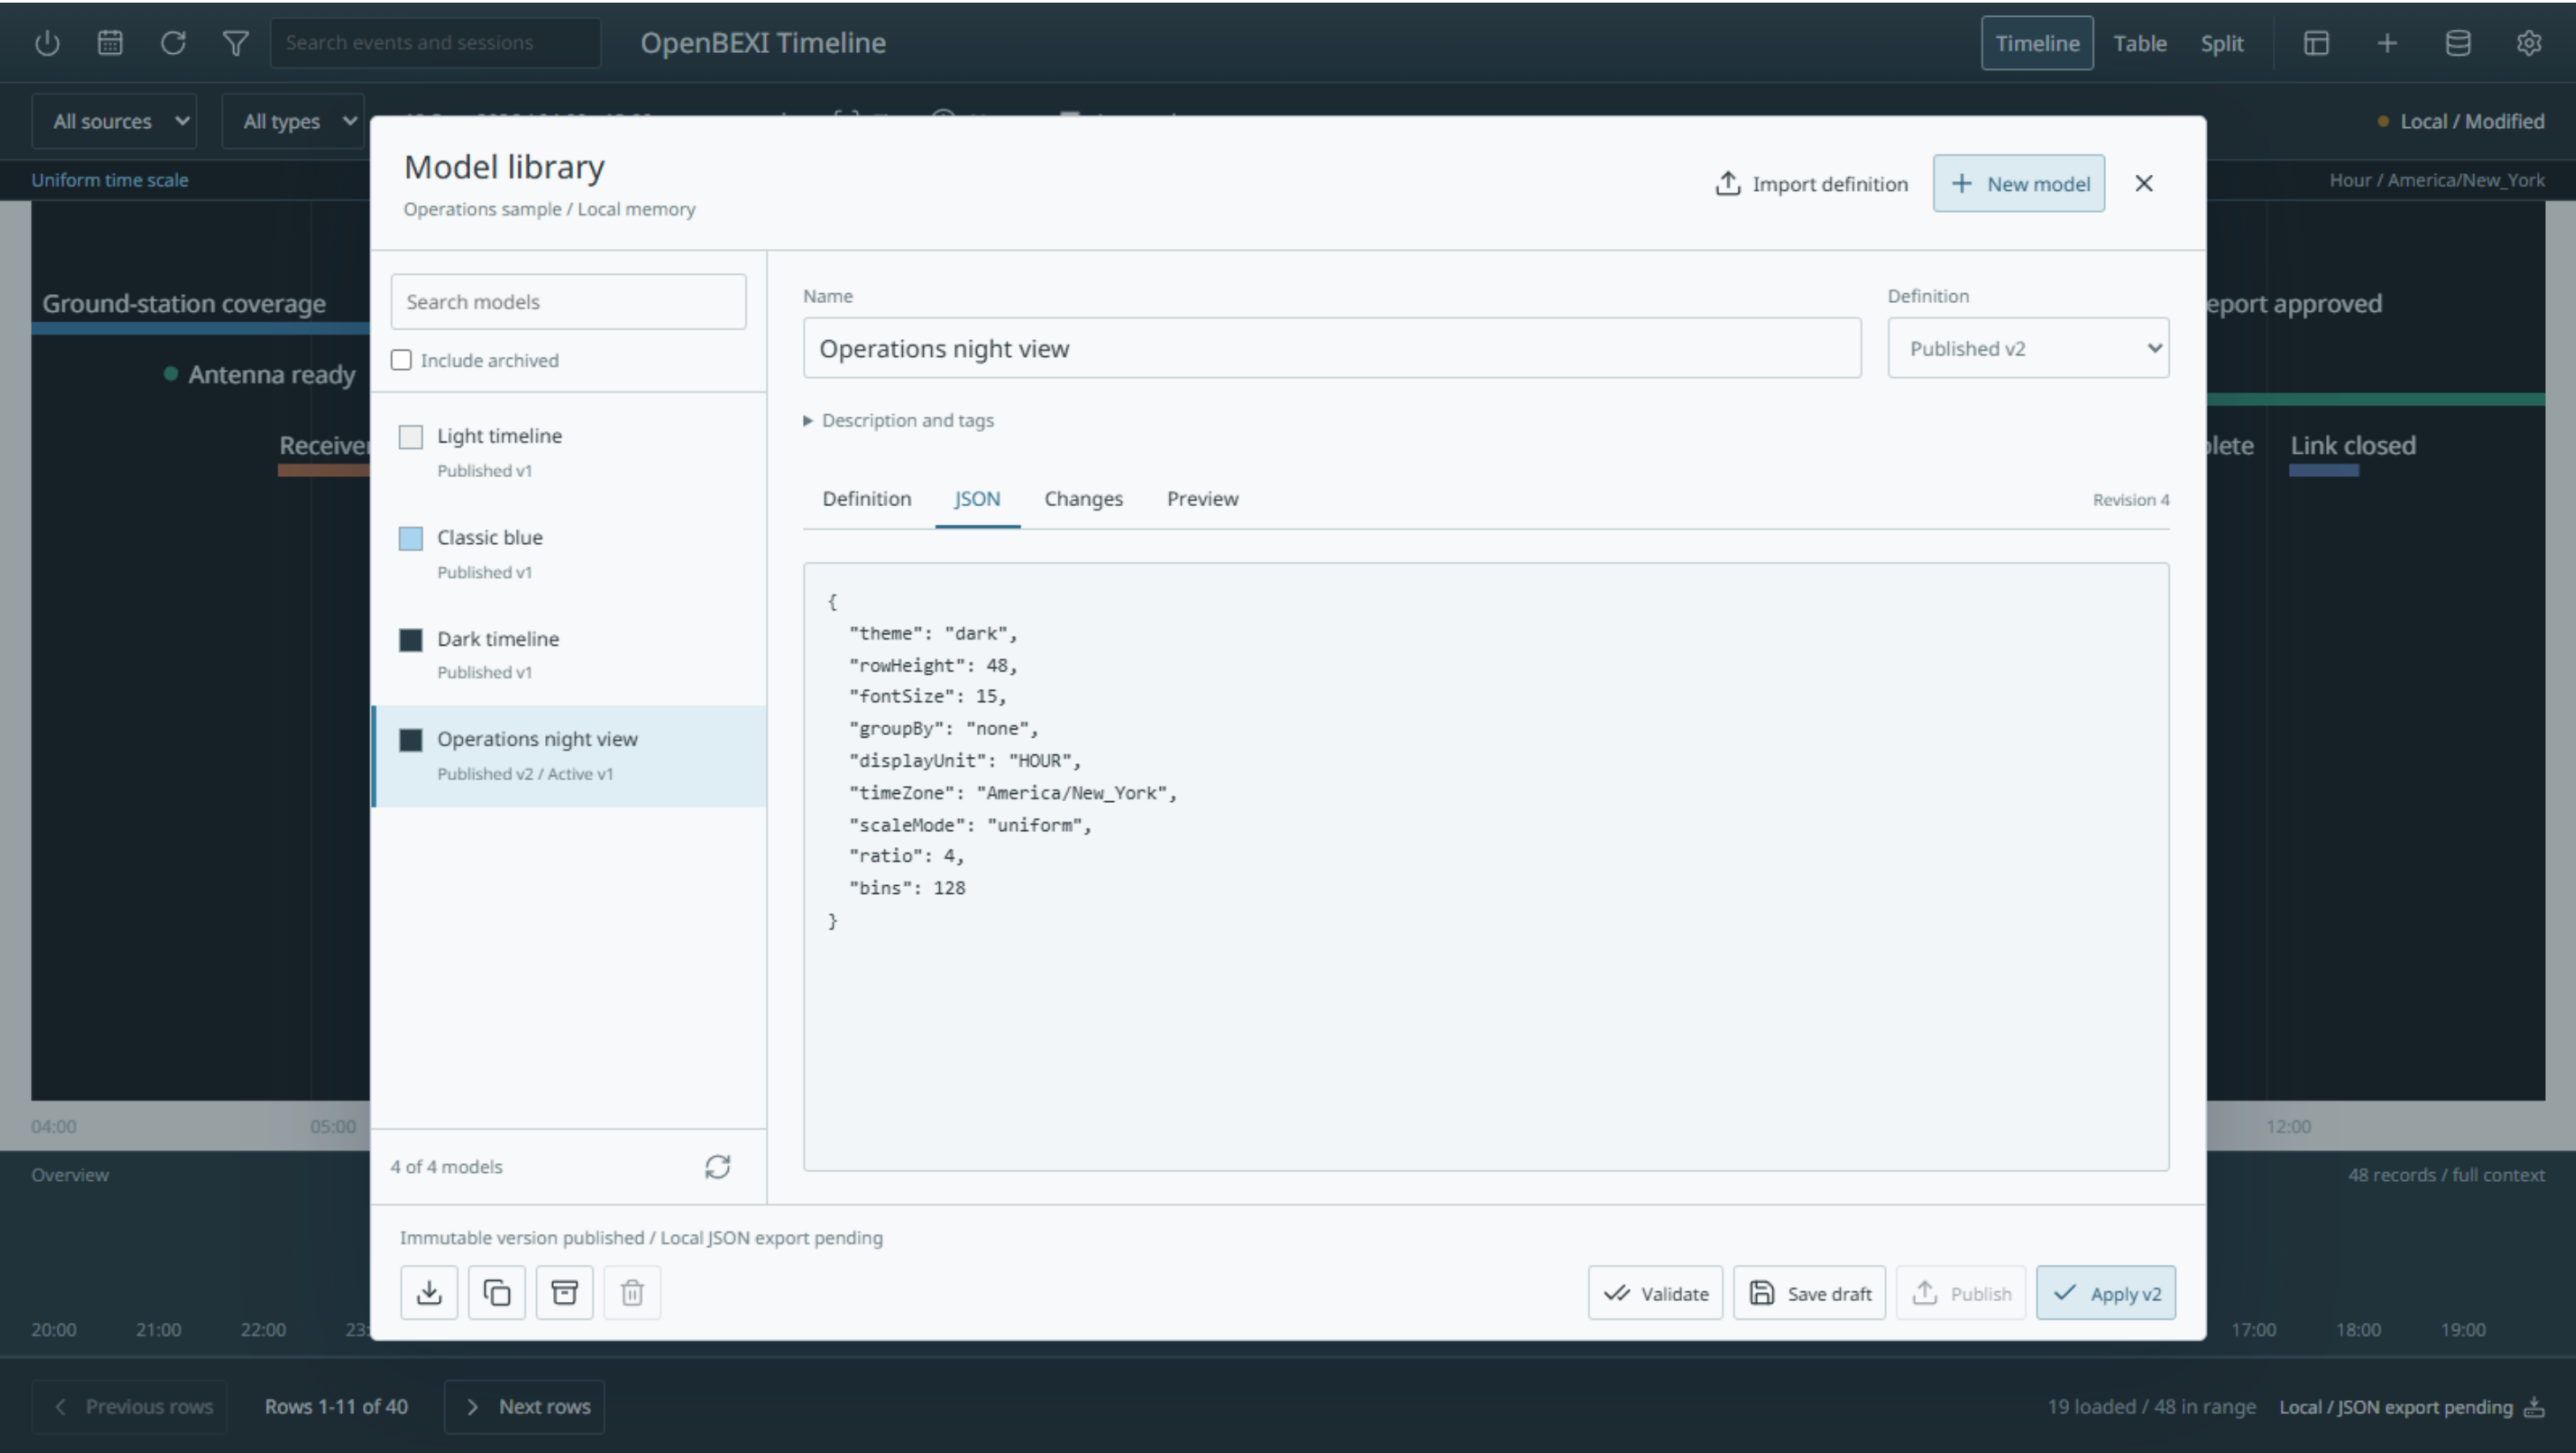

OpenBEXI Timeline 2.0 / Versioned model library

Draft editing, immutable publication and explicit version selection keep the active workspace stable.

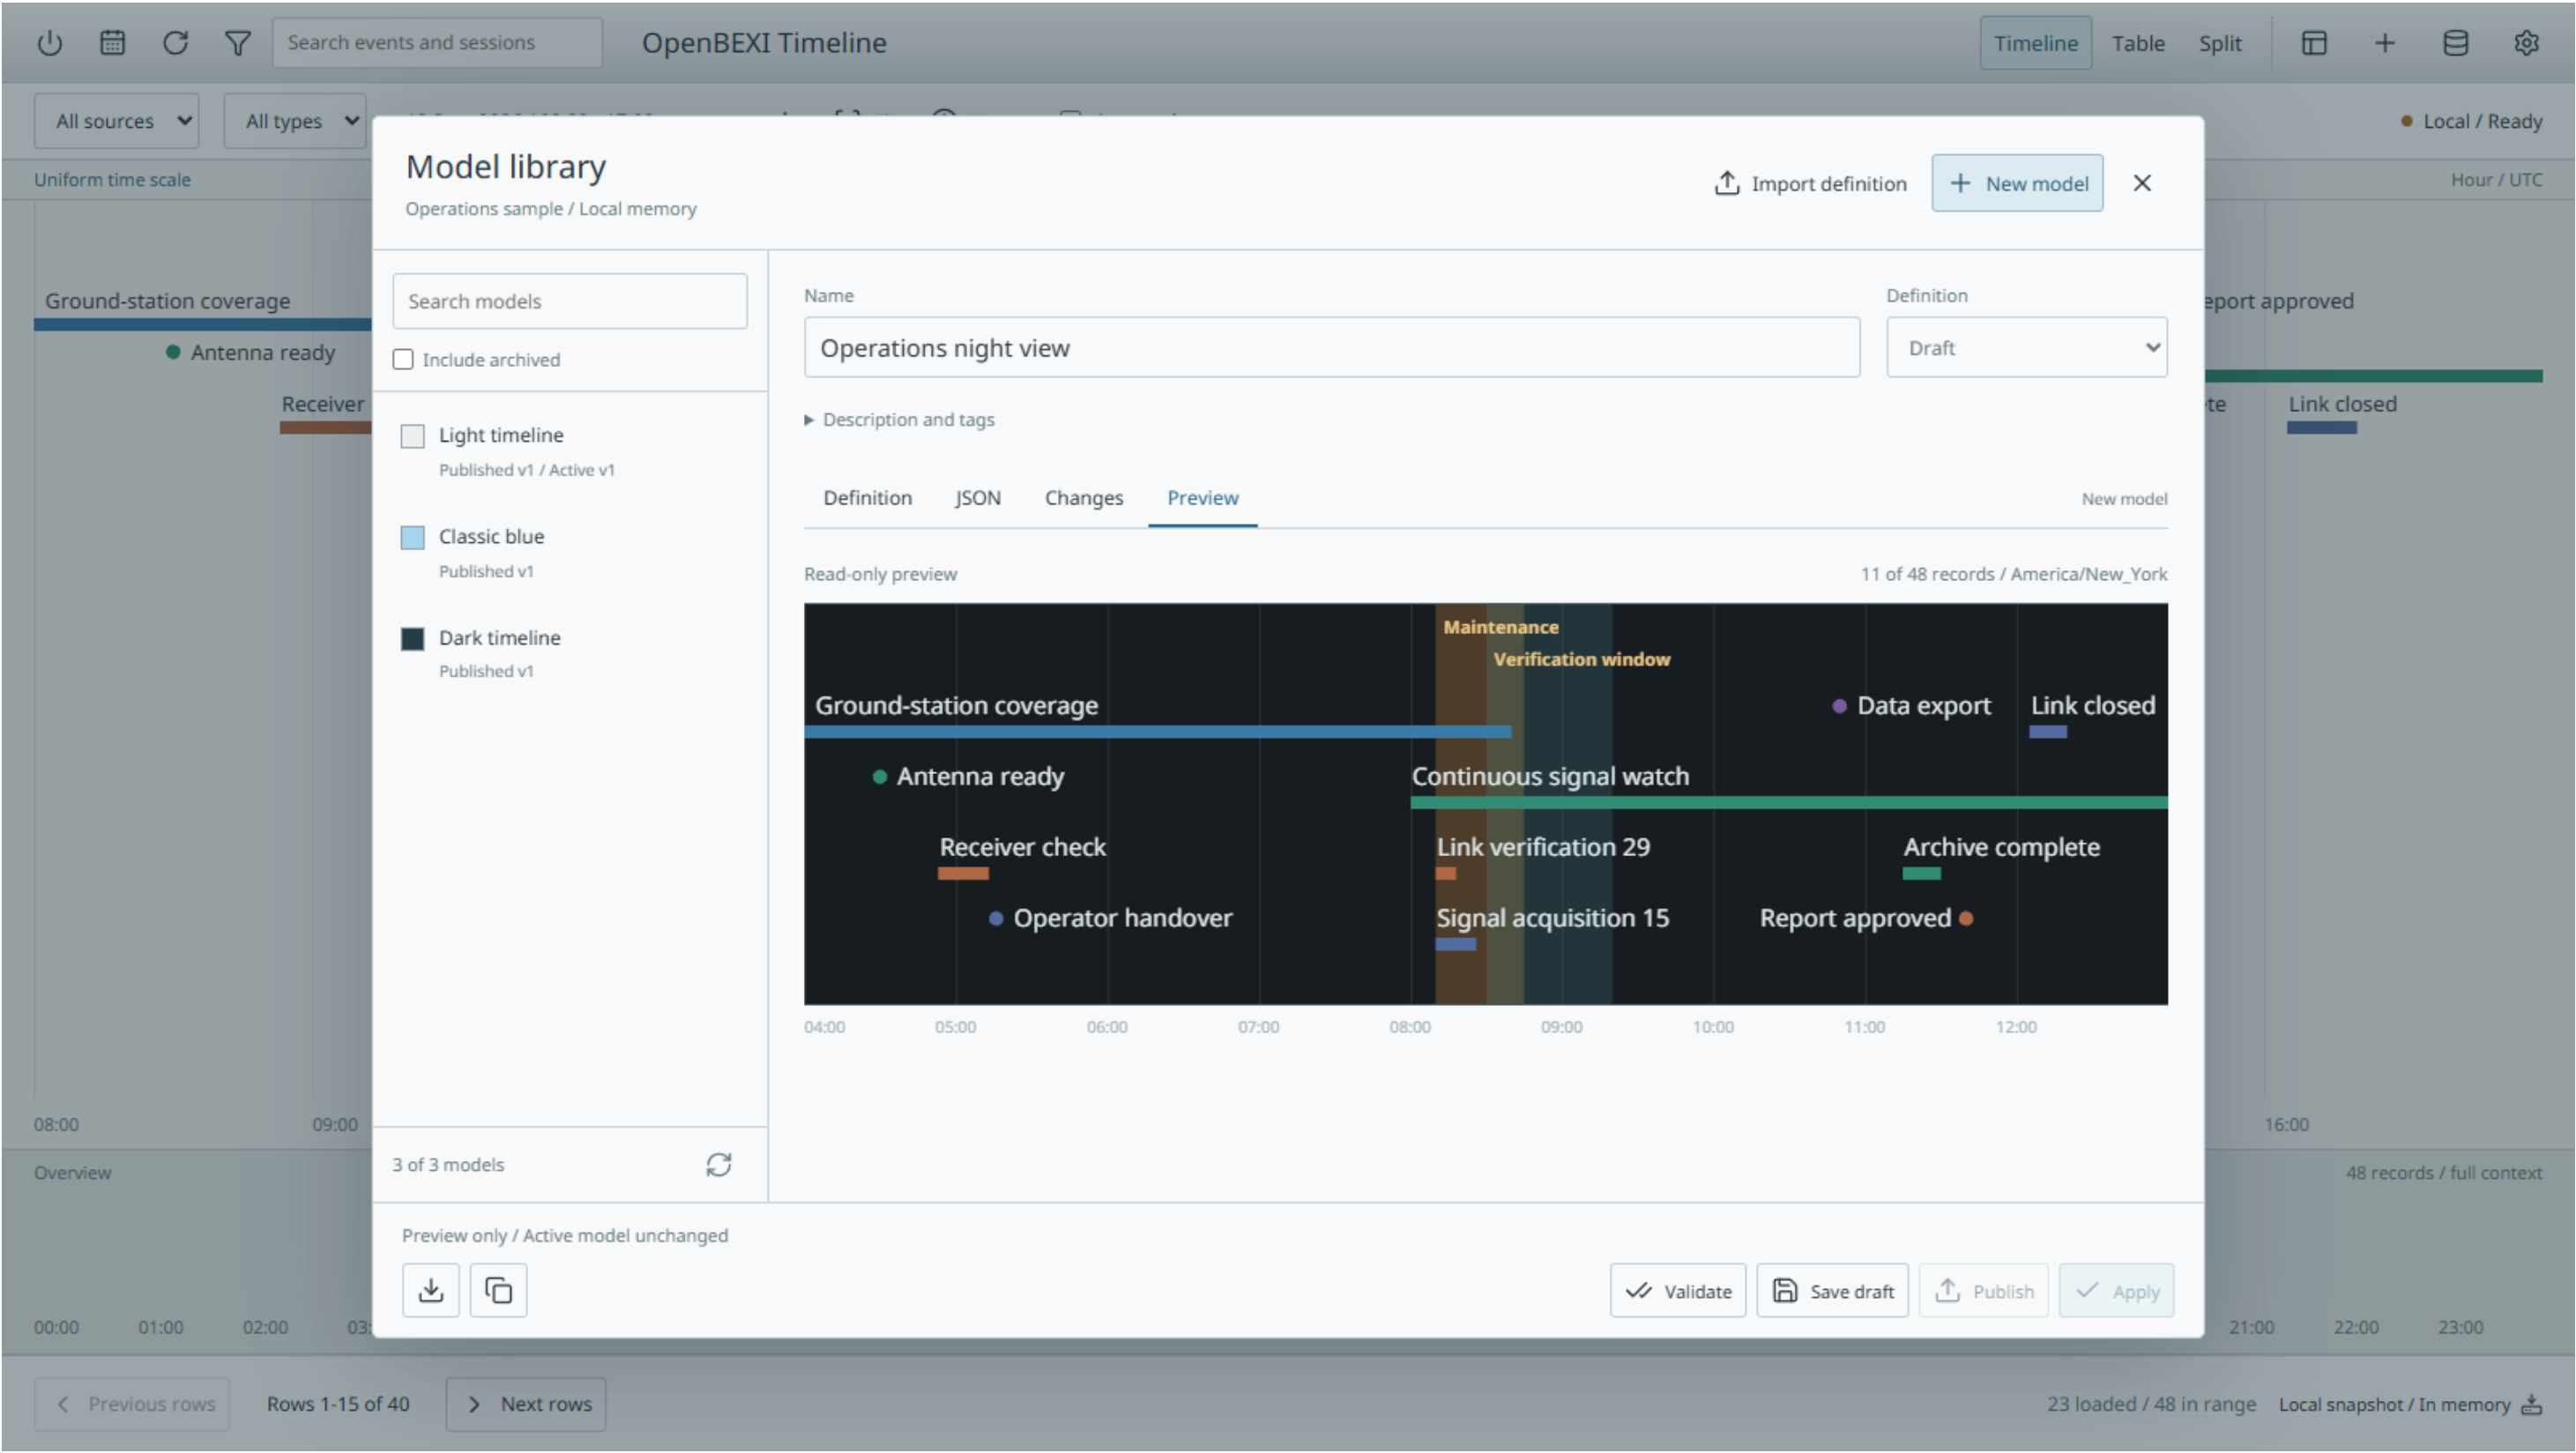

OpenBEXI Timeline 2.0 / Model definition editor

Structured fields and strict JSON share validation; portable definitions are separate from complete history exports.

OpenBEXI Timeline 2.0 / Independent model preview

The candidate model renders a separate read-only query without changing the active timeline or its temporal focus.

OpenBEXI Timeline 2.0 / Complete-query table

Stable sorting and page traversal cover the complete chosen scope, independent of timeline row capacity.
