

Default dataset / Current timeline

Complete 48-record operations sample. Existing editing, timeline and overview behavior is retained. No reference PNG was supplied; this is an unapproved baseline.

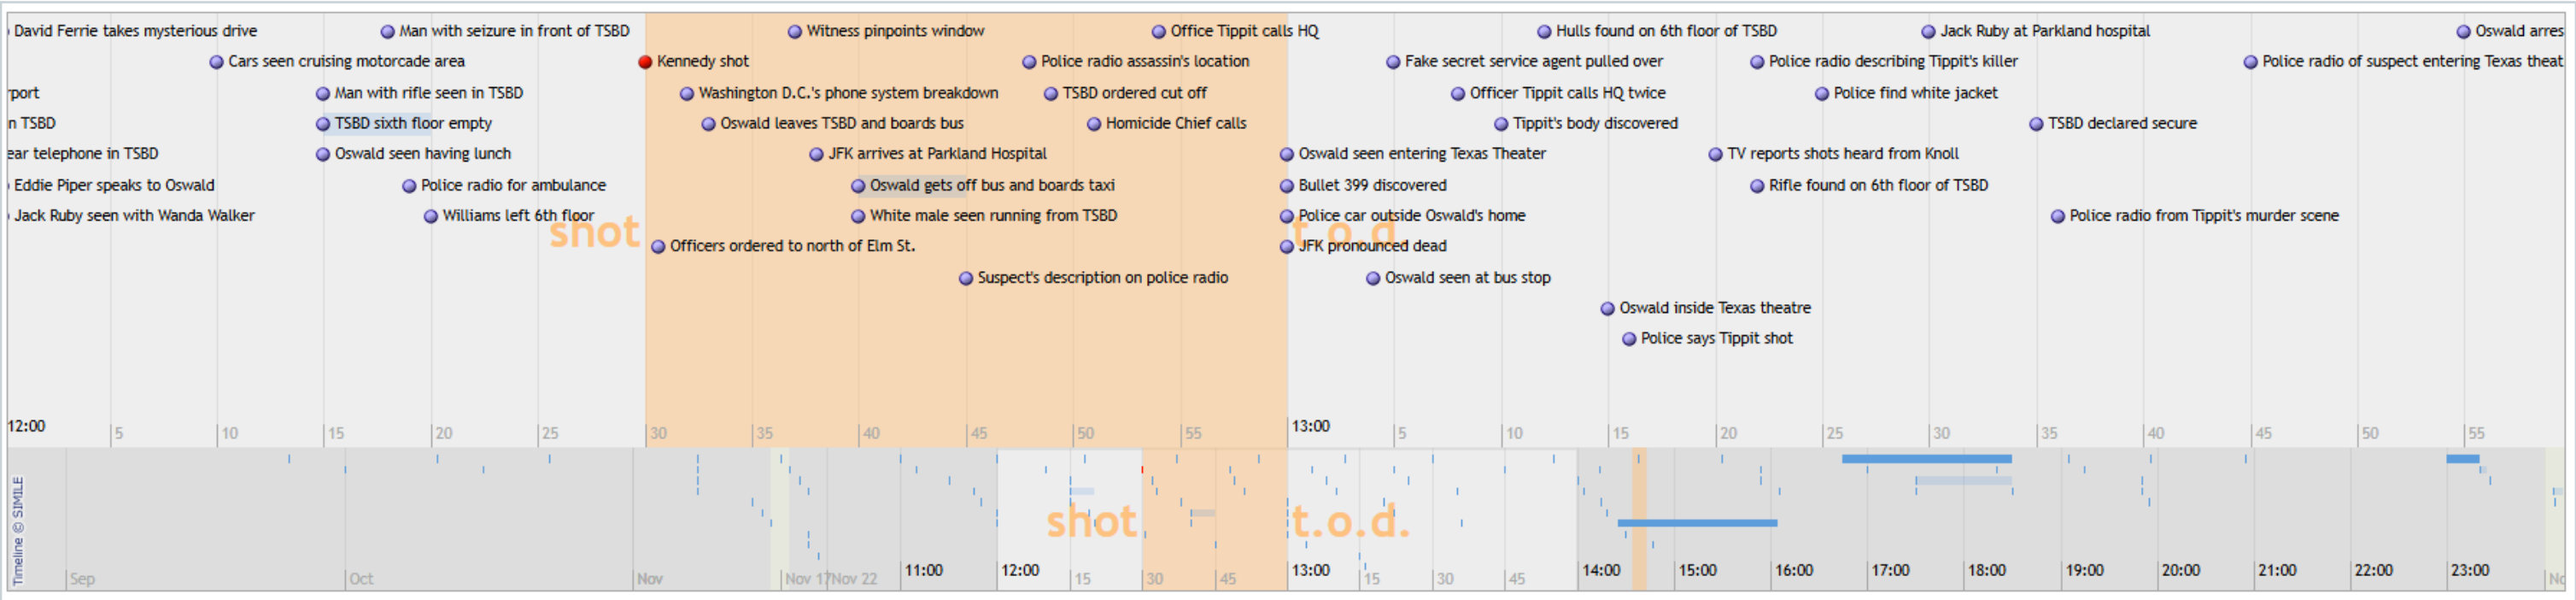

Ephemeris / Current timeline

Complete 127-record snapshot with hourly detail and a broader overview. No reference PNG was supplied; this is an unapproved baseline.

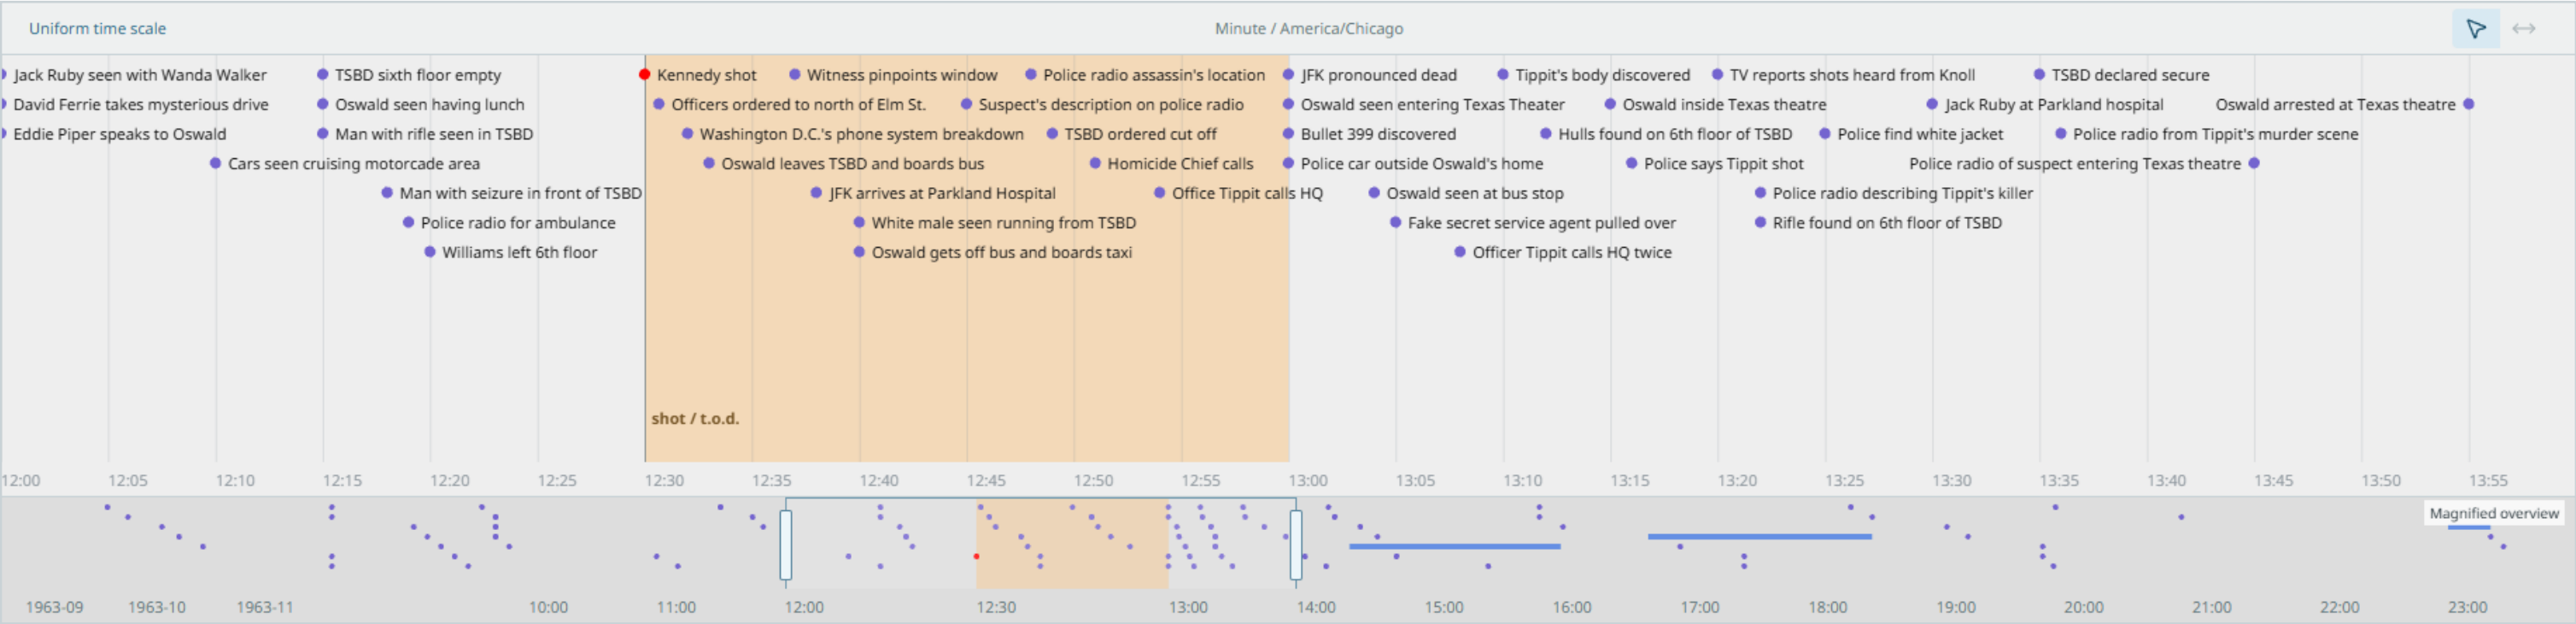

JFK / Supplied reference

User-provided comparison image. This page is a reference, not a capture of the new application. Original asset attribution and redistribution rights remain unverified.

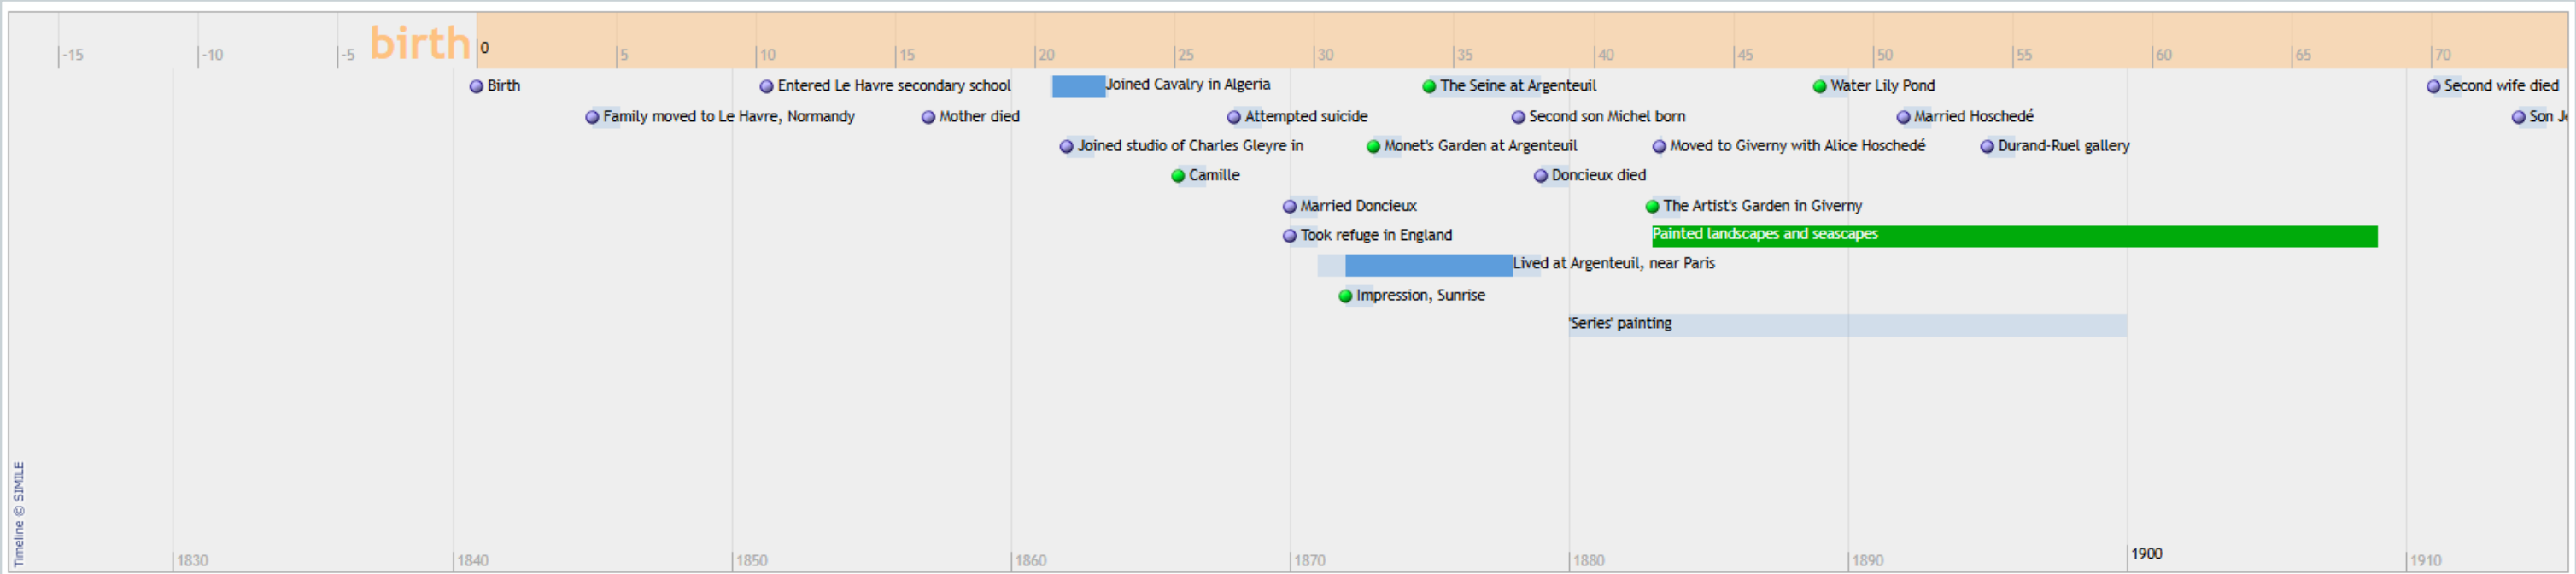

JFK / Current timeline

Complete 130-record source. The initial view uses America/Chicago time, a translucent time zone and a magnified overview. Row packing and typography are not pixel-identical to the reference.

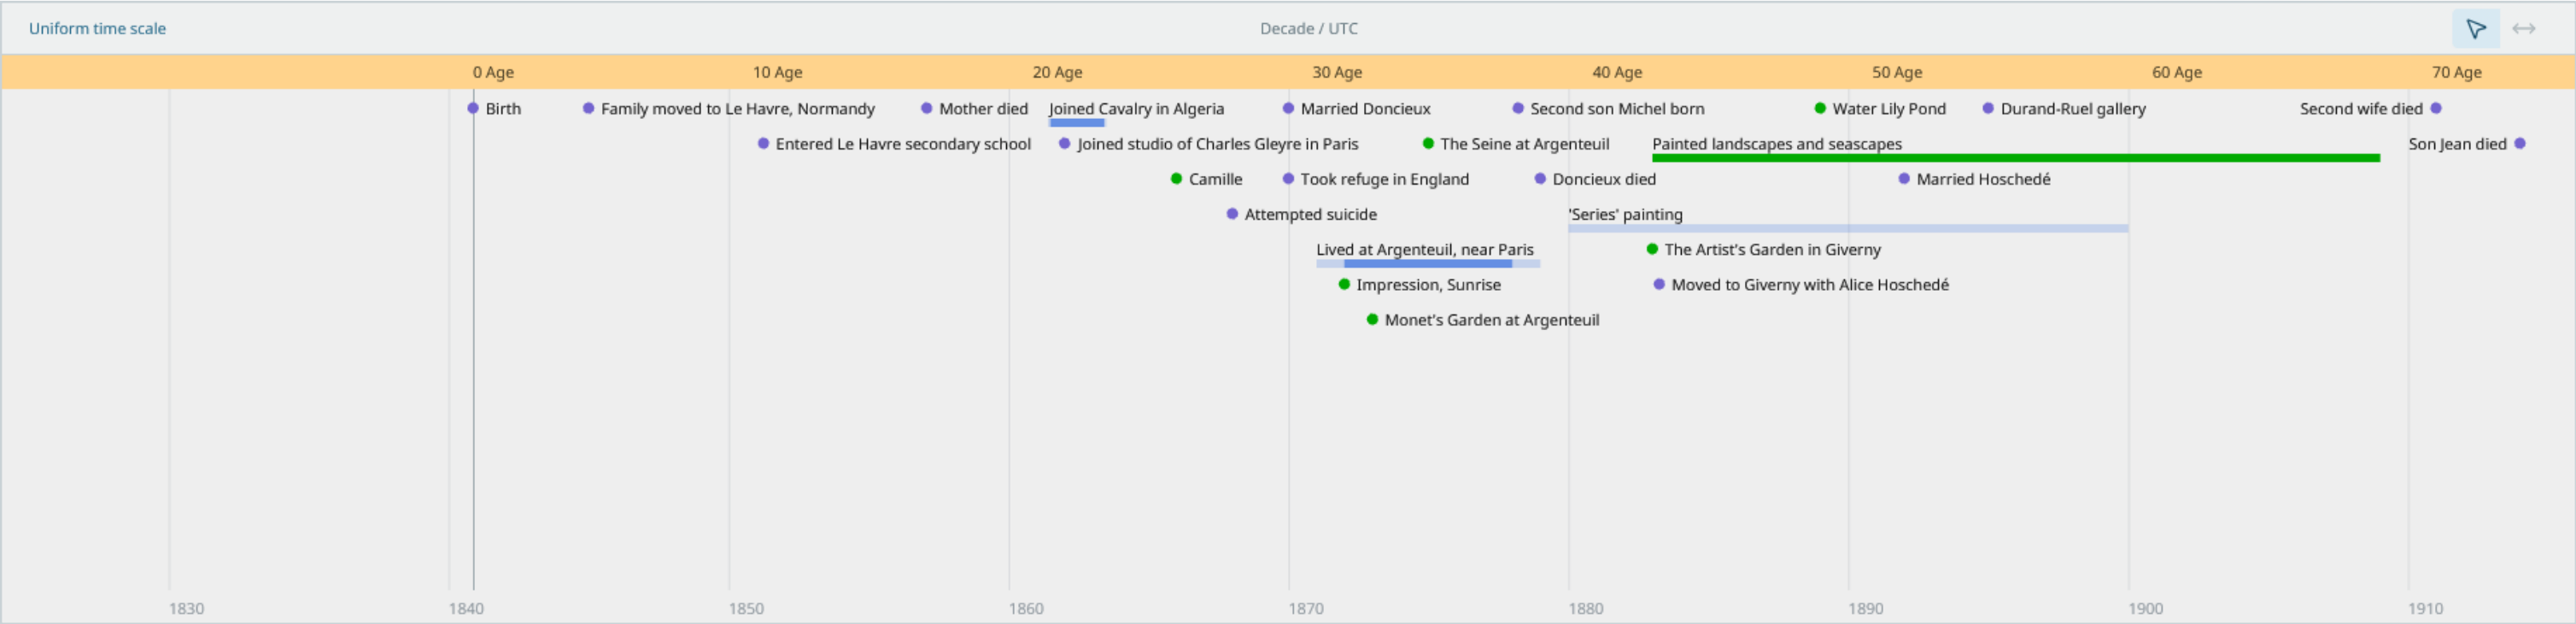

Monet / Supplied reference

User-provided comparison image. This page is a reference, not a capture of the new application. Original asset attribution and redistribution rights remain unverified.

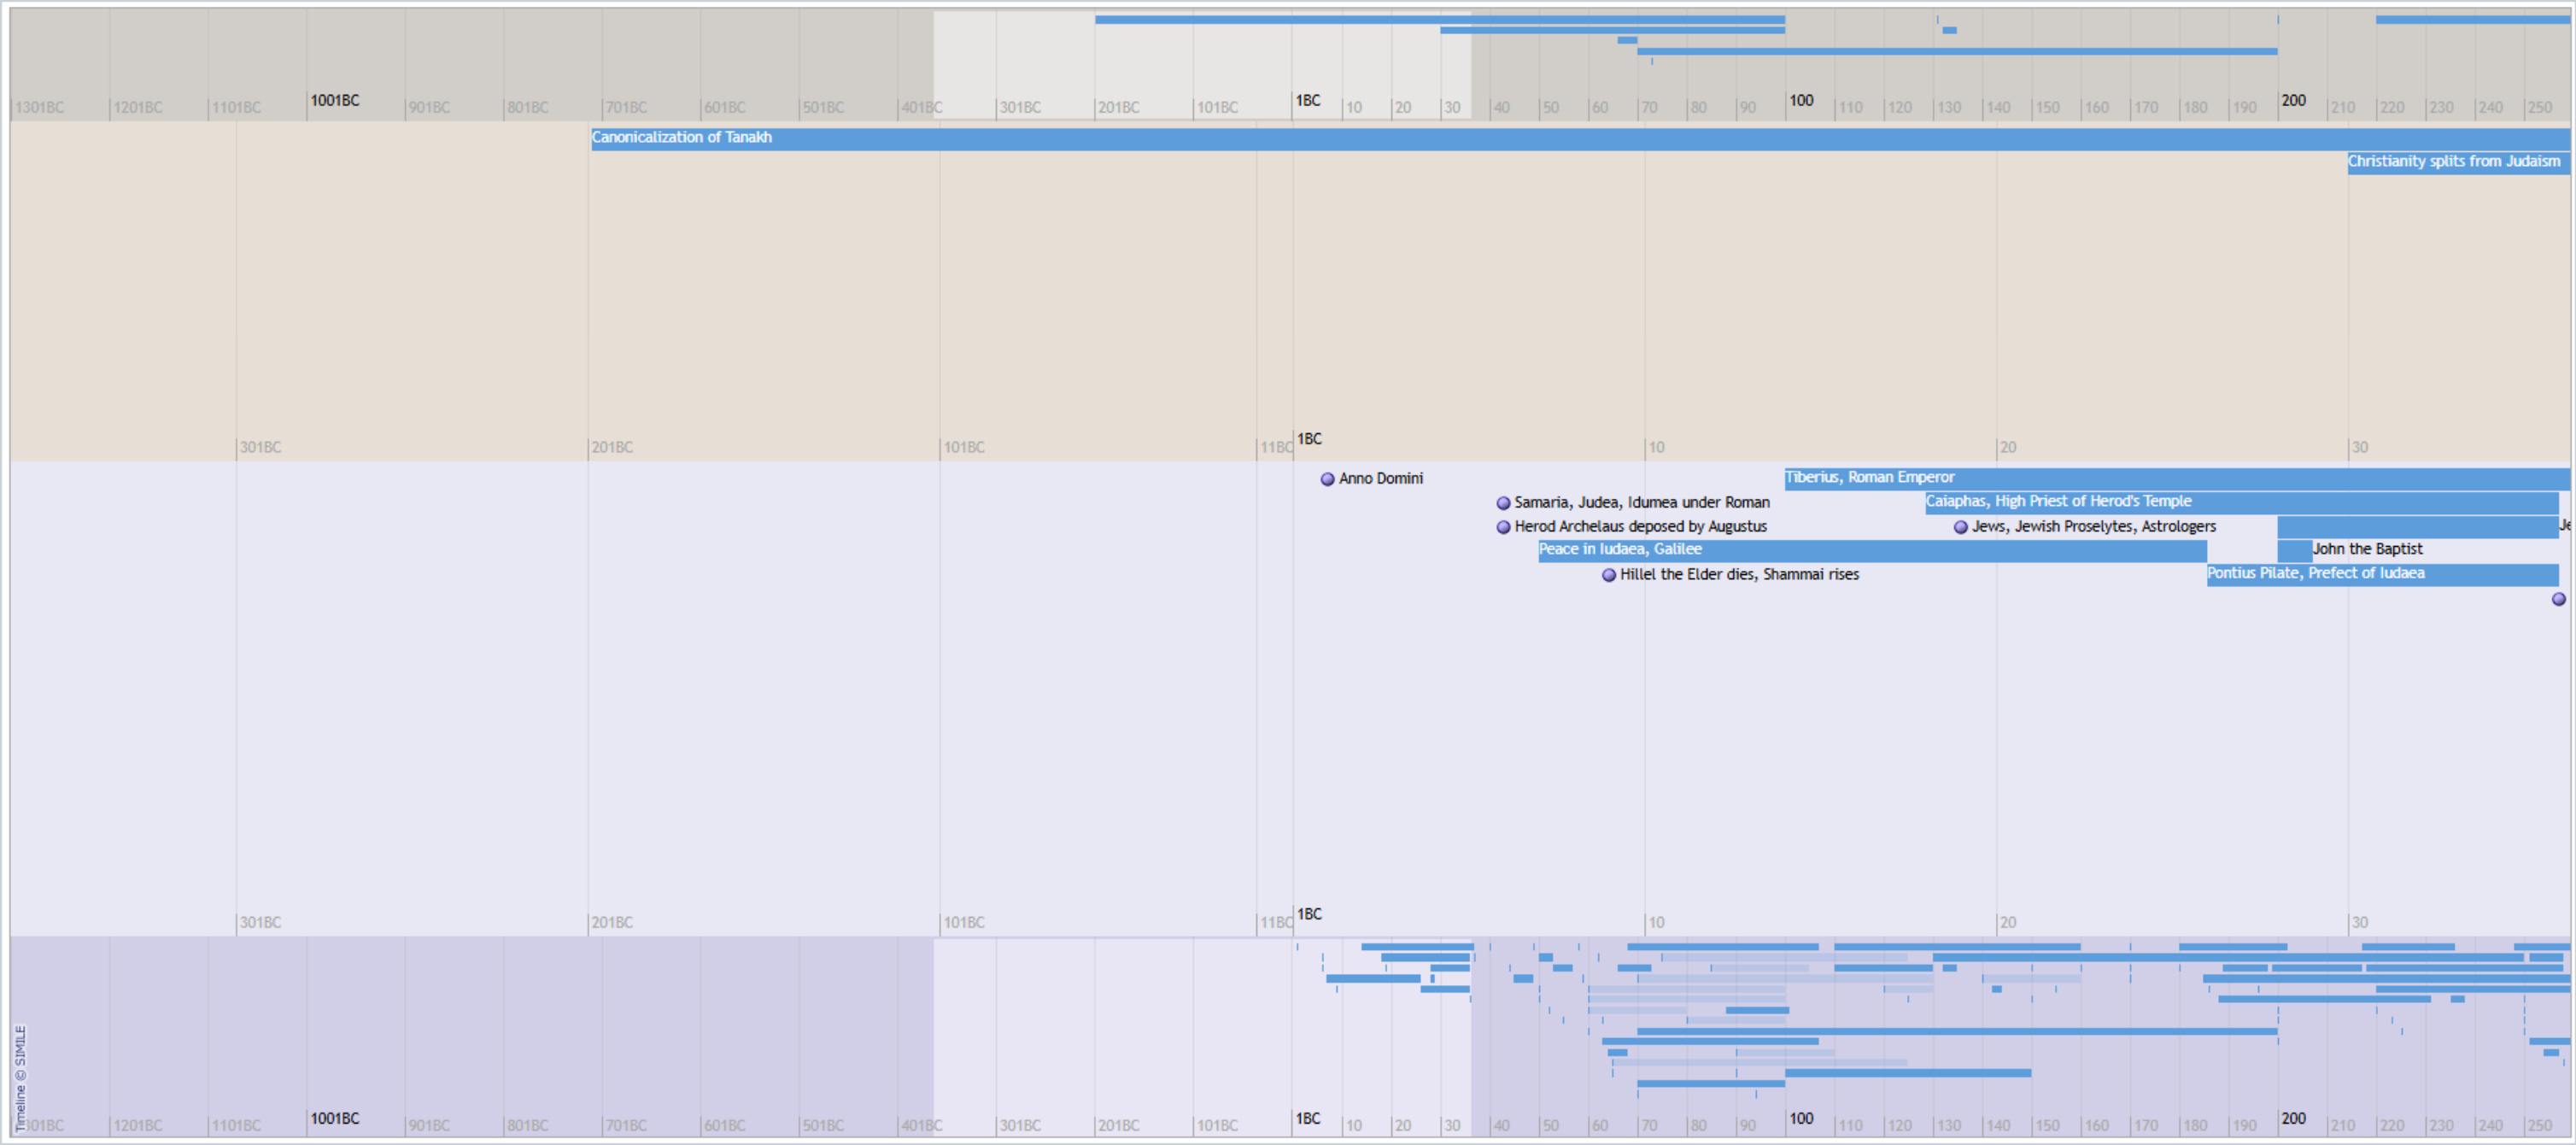

Monet / Current timeline

Complete 27-record source. One detail band retains the absolute decade axis and a separate age axis. Uncertain dates and source artwork references are preserved in metadata.

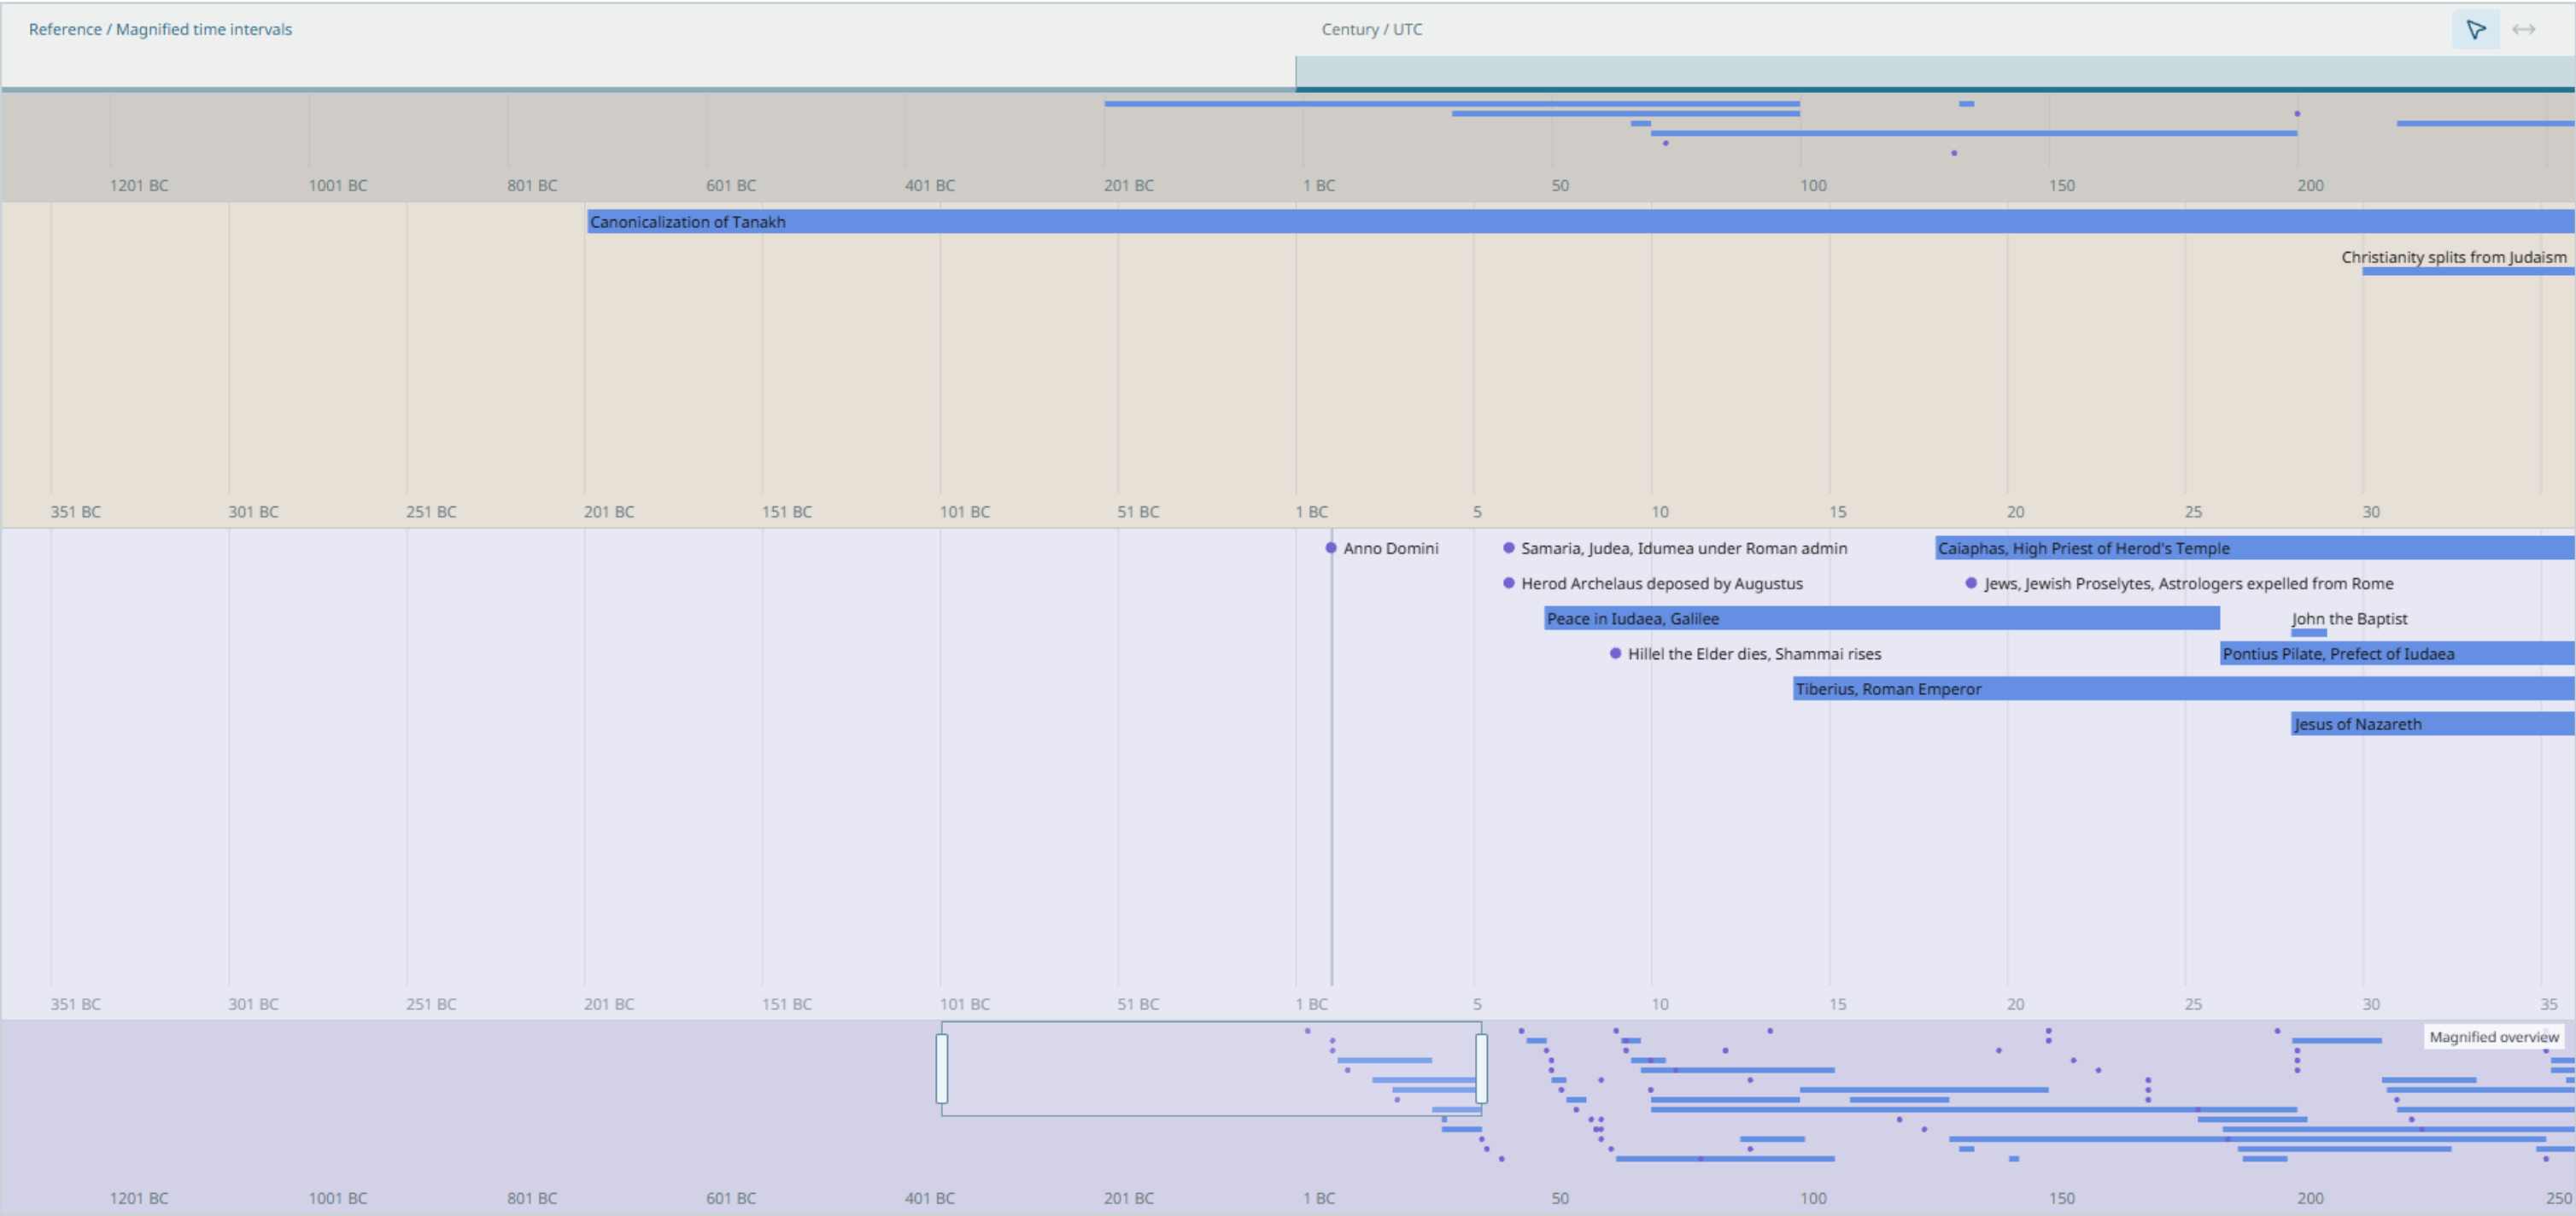

Religions / Supplied reference

User-provided comparison image. This page is a reference, not a capture of the new application. Original asset attribution and redistribution rights remain unverified.

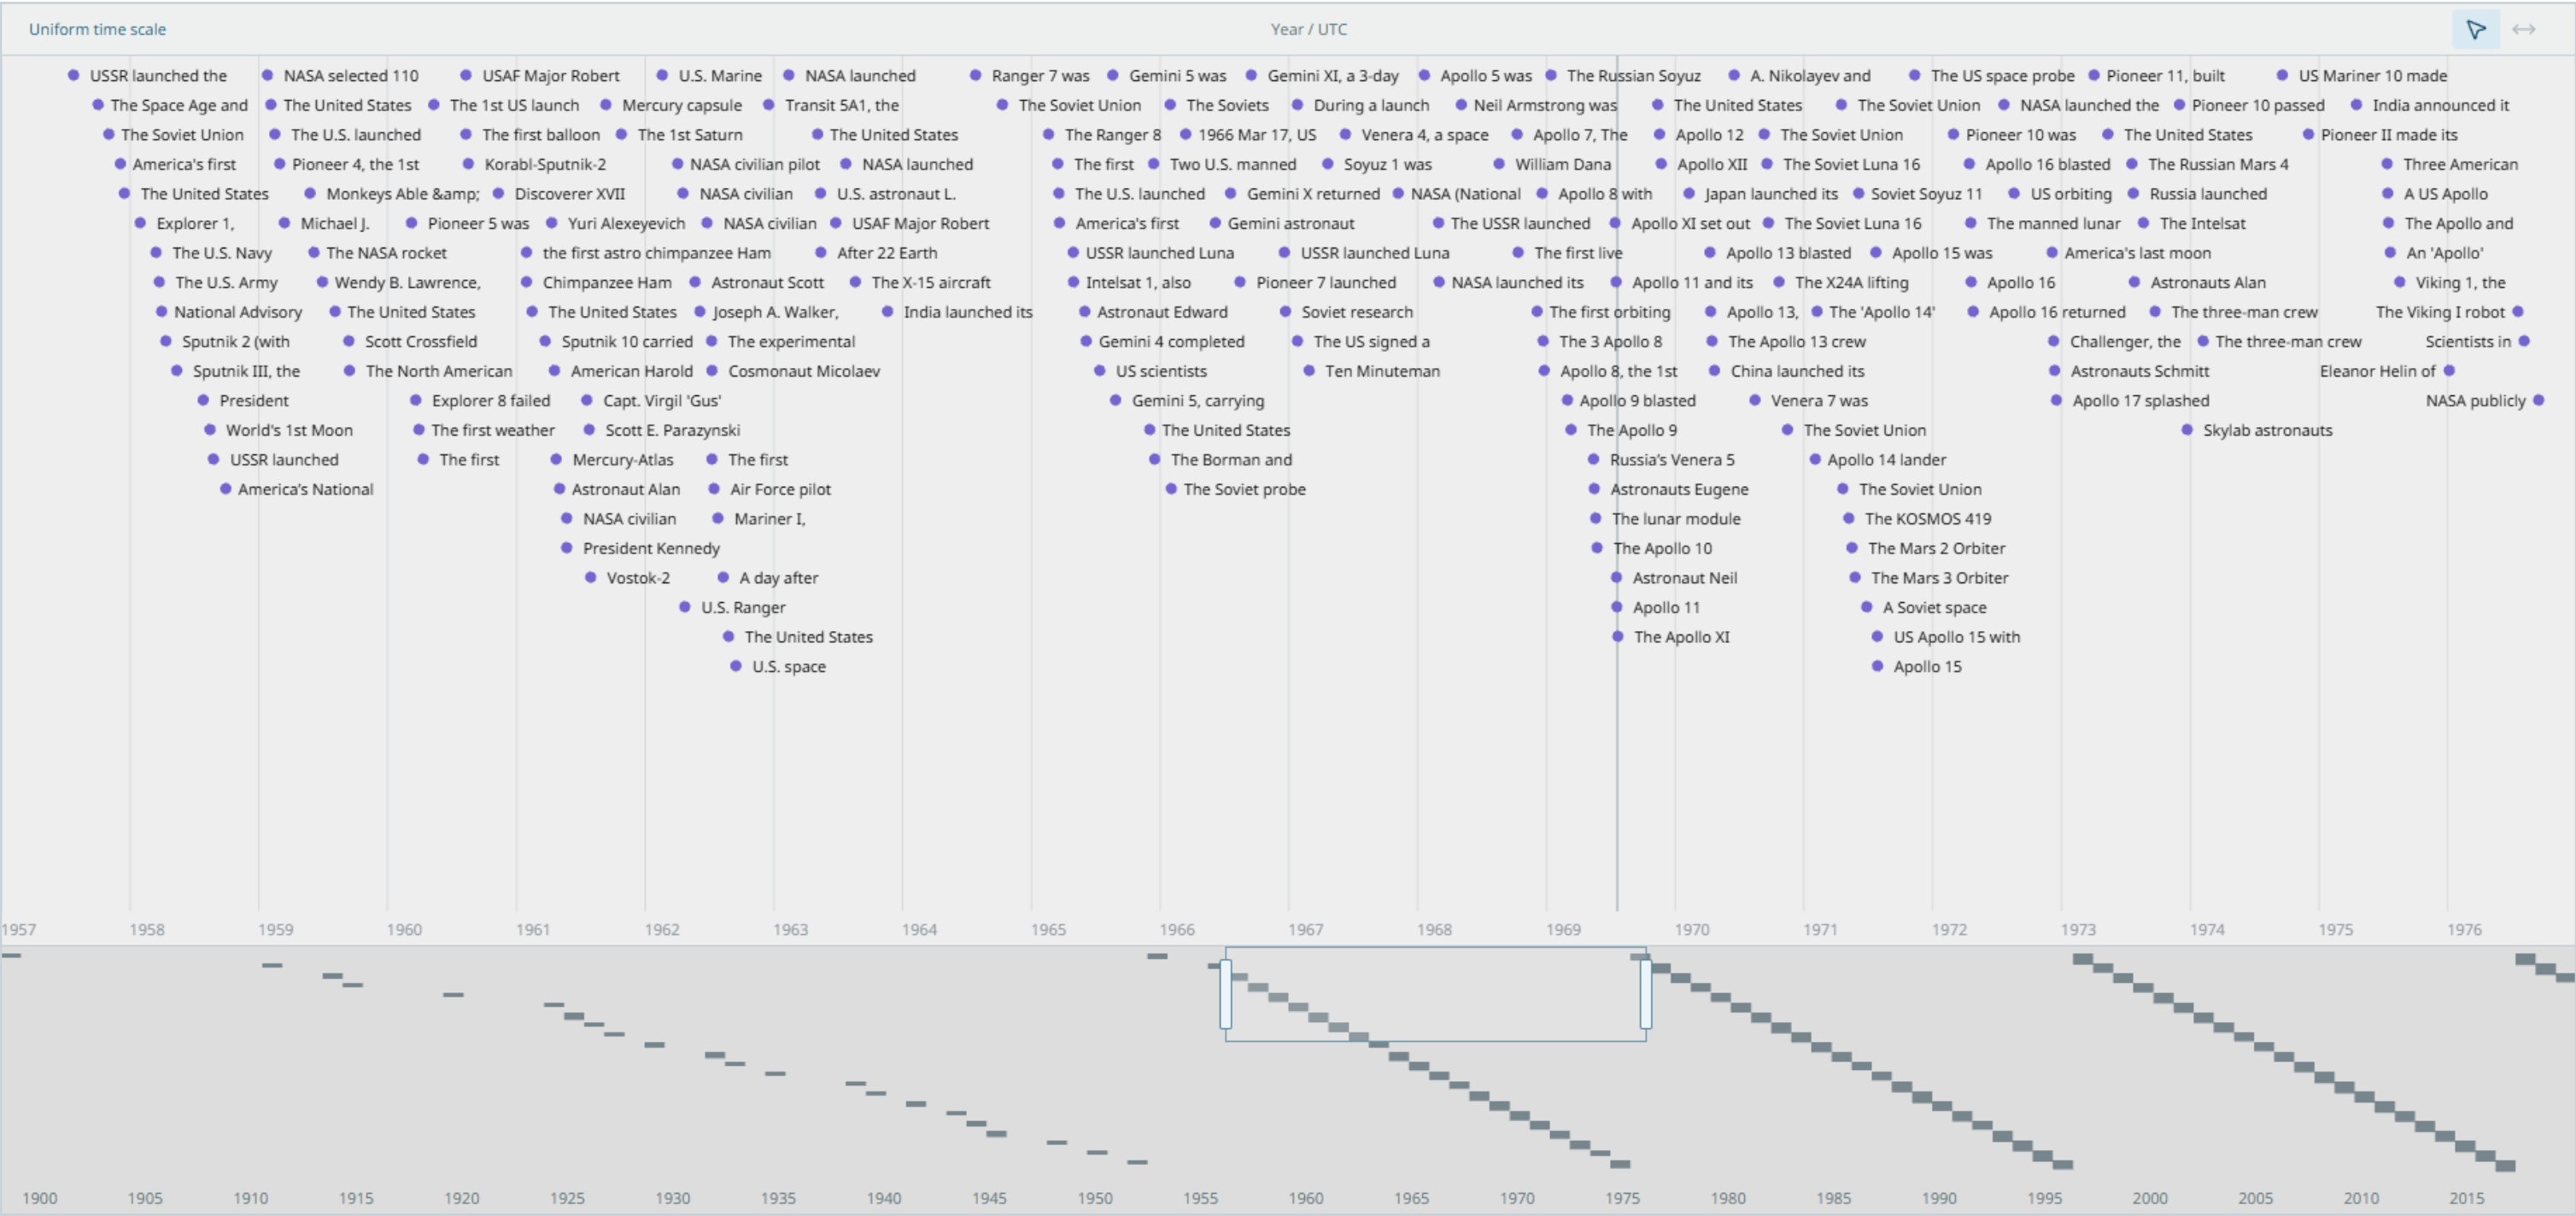

Religions / Current timeline

Complete 730-record source. Four bands separate source-specific context and detail. BC dates, magnified intervals and contrast-aware duration labels use shared time mappings.

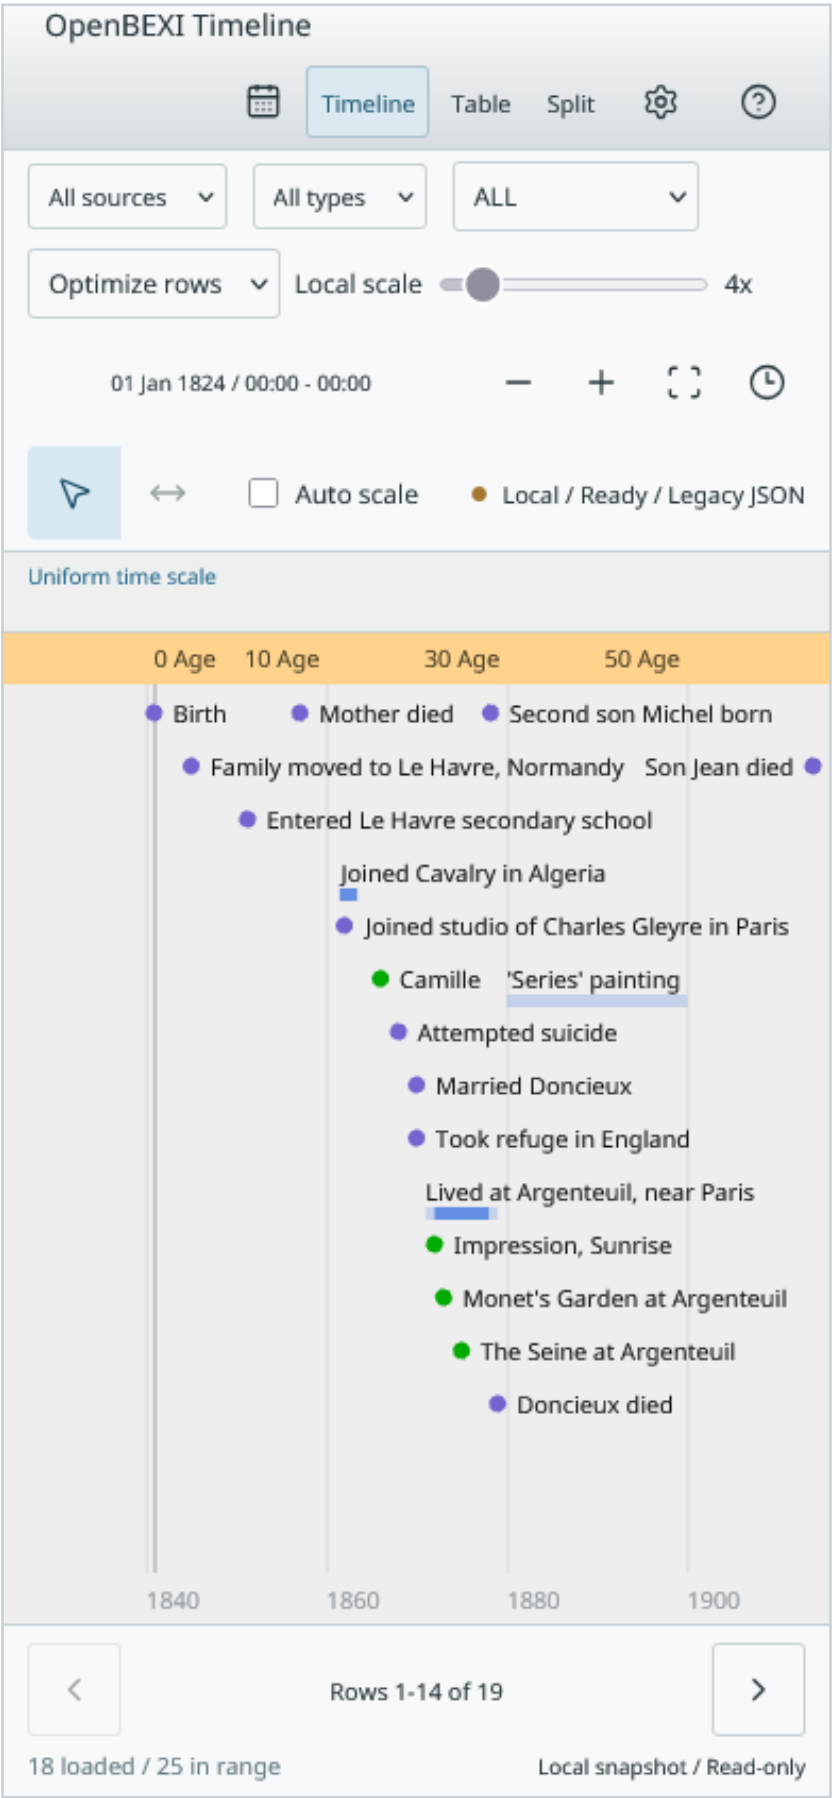

Space exploration / Current timeline

Complete 1,287-record source. The initial window is 1957-1977. One literal source year of 201 is preserved and flagged for review. No reference PNG was supplied.

Monet / Mobile

Actual 390 x 844 browser capture. The same standalone build keeps navigation and row pagination available without a Python process, HTTP requests or a CDN.

Religions / Mobile

Actual 390 x 844 browser capture. The same standalone build keeps navigation and row pagination available without a Python process, HTTP requests or a CDN.
